

V2B-R

MAY 14 1974

J. Tillou
Senior Reactor Inspector
Construction Branch

OYSTER CREEK (DN 50-219)

JCP&L has identified vessel head clad indications which are currently being investigated, prior to returning the reactor to power on May 27.

It is requested that you provide technical support to determine the safety significance, causative mechanism and extent of these indications and determine the status of other reactor internals with respect to this problem.

D. L. Capton
Senior Reactor Inspector
BWR Projects
Reactor Operations Branch
