Attn: Mr. James R. Miller, Chief
Operating Reactors Branch No. 3
Division of Licensing
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Serial No. 479A
NO/JHL:acm
Docket No. 50-339
License No. NPF-7

Gentlemen:

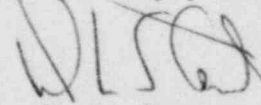

VIRGINIA ELECTRIC AND POWER COMPANY
NORTH ANNA POWER STATION UNIT NO. 2
REACTOR VESSEL MATERIAL SURVEILLANCE TEST RESULTS

In our letter dated August 16, 1984, Serial No. 479, we indicated that an amendment request would be submitted to the NRC by October, 1984 based on the evaluation of the first capsule of the reactor vessel surveillance program for North Anna Unit No. 2. This amendment request would revise the pressure-temperature limits and the operating period for the new limits.

During the review of the proposed amendment request to the pressure-temperature limits, it was determined that the effect on the PORV low temperature protection setpoints to provide adequate over-pressurization protection must be evaluated. To avoid multiple amendment submittals, we propose submitting the revised pressure-temperature limits, with any necessary PORV setpoint changes, by February, 1985. This will allow a combined submittal with the Unit 1 amendment request.

If you have further questions please contact us.

Very truly yours,

W. L. Stewart
