Mr. Robert D. Martin
Regional Administrator, Region IV
U.S. Nuclear Regulatory Commission
611 Ryan Plaza Drive, Suite 1000
Arlington, TX 76011

Dear Mr. Martin:

Subject: Waterford 3 SES
Docket No. 50-382
Significant Construction Deficiency No. 93
Charging and Letdown Containment Isolation Valve Deficiency
Supplemental Information

- References:
1. LP&L letter W3P85-0339 dated February 21, 1985
 2. Waterford 3 Potentially Reportable Event PRE 85-054 dated February 21, 1985

The reference 1 letter provided the Final Report on SCD-93. Subsequent to that submittal Waterford 3 experienced a potentially reportable event (reference 2) which was similar to the SCD-93 problem, i.e., containment isolation valve CVC-103 failed to close after plant cooldown. Please be advised that we are investigating this PRE and we will apprise you of our findings and provide details on the valve failure when the information is obtained.

Should you have further questions on the matter at this time please contact G.E. Waller, Onsite Licensing Coordinator at (504) 464-3499.

Very truly yours,

K.W. Cook

Nuclear Support & Licensing Manager
