**Summary:**

This Apparent Test Results (ATR) report is compiled in accordance with the requirements specified in the Test Plan (TP) 25A5764R1 (GE document) section 10. The report covers the results for the PANDA Transient Test M3. The ATR summarizes the apparent results and includes: test number, test objective, test date and time, data recording period, data analysis period, name of data file and ORACLE data tables, list of failed or unavailable instruments considered to be required for the test, list of required instruments with zero or reference check points not in tolerance or in over-range or under-range during test, deviations from test procedure and problems which occurred during test. Statements are made whether or not the test objective has been reached and the data were recorded correctly. A table of actual initial conditions based on average and standard deviation over one minute time period just before the test start for all parameters with a specified acceptance criteria in section 9.2 of TP is provided as well as time history plots over test duration for all top priority measurements.

## TEST M3

**1. TEST OBJECTIVES:**

The objectives of the PANDA integral system tests are to provide additional data to: a) confirm the capability of TRACG to predict SBWR containment system performance, including potential systems interaction effects (*Integral System Tests*) and b) demonstrate startup and long-term operation of a passive containment cooling system (*Concept Demonstration*).

The specific objective of test M3 which was conducted with nominal post-LOCA conditions after a Main Steam Line Break is to establish the base case and demonstrate transient system response.

**7. RPV POWER CURVE:**

Power analysis<sup>1</sup> period: 20 to 73510 sec

Maximum negative deviation:

Maximum positive deviation:

Standard deviation:

Power curve tolerance: ±25.0 [kW]

Definition of RPV power deviation ( $\Delta$ Power) and standard deviation ( $\sigma$ ):

$$\Delta \text{Power} = \text{Power}_{th} - \sum_{j=1}^6 \text{MW.RP.j}$$

$$\sigma = \sqrt{\frac{1}{n} \sum_{k=1}^n \left( \text{Power}_{th}^k - \sum_{j=1}^6 \text{MW.RP.j}^k \right)^2}$$

$\text{Power}_{th}$ : theoretical power

$\sum_{j=1}^6 \text{MW.RP.j}$ : measured power

$n$ : # of measurements throughout the test

**8. TEST INSTRUMENTATION**

**LIST OF FAILED OR UNAVAILABLE REQUIRED INSTRUMENTS:**

Mass flow rate in GDCS Return Line	MV.GRT	(NCR: P-007)
