AMENDMENT NO. 213

DEC 0 2 1993

1.0 DEFINITIONS (Cont'd)

- GG. <u>Site Boundary</u> Shell be that line beyond which the land is not owned, leased, or otherwise controlled by TVA.
- HE. Unrestricted Ares Any area at or beyond the SITE BOUNDARY to which access is not controlled by the licenses for purposes of protection of individuals from exposure to radiation and radioactive materials or any area within the SITE BOUNDARY used for industrial, commercial, institutional, or recreational purposes.
- II. Dose Equivalent 1-131 The DOSE EQUIVALENT I-131 shall be the concentration of I-131 (in µCi/gm) which alone would produce the same thyroid dose as the quantity and isotopic mixture of I-131, I-132, I-133, I-134, and I-135 actually present. The thyroid dose conversion factor used for this calculation shall be those listed in Table III of TID-14844 "Calculation of Distance Factors for Power and Test Reactor Sites".
- JJ. <u>Geneous Waste Treatment System</u> The charcoal adsorber vessels installed on the discharge of the steam jet air ejector to provide delay to a unit's offgas activity prior to release. Any individual except when that
- EK. Members of the Public As individual is a controlled or UNDESTRICTED AREA. However, as individual is not a MEMBER OF THE PUBLIC during any period is which the individual receives an occupational dose (as defined in 10 CFE 20).
- LL. Surveillance Surveillance Requirements shall be met during the OPERATIONAL CONDITIONS or other conditions specified for individual limiting conditions for operation unless otherwise stated in an individual Surveillance Requirements. Each Surveillance Requirement shall be performed within the: apecified surveillance interval with a maximum allowable extension not to exceed 25 percent of the specified surveillance interval. It is not intended that this. (extension) provision be used repeatedly as a convenience to extend surveillance intervals beyond that specified forsurveillances that are not performed during refueling outages.

Performance of a Surveillance Requirement within the specified time interval shall constitute compliance and OPERABILITY requirements for a limiting condition for operation and. associated action statements unless otherwise required by these specifications. Surveillance Requirements do not have to be performed on inoperable equipment.

BFN Unit 1	Minimum No. Instrument Channels Operable per Irip Sys(1)(11)	Function		Action (1)	Remarks
	1(15)	Instrument Channel - Reactor Building Ventilation High Radiation - Refueling Zone	≤ 100 mr/hr or downscale	F	 1 upscale channel or 2 downscale channels will a. Initiate SGTS b. Isolate refueling floor c. Close atmosphere control system.
	2(7) (8)	Instrument Channel SGTS Flow - Train A R. H. Heaters	≥2000 cfm and <u>≤</u> 4000 cfm	H and (A or F)	Below 2000 cfm airflow R.H. heaters shall be shut off.
ری	2(7) (8)	Instrument Channel SGIS Flow - Train B R. H. Heaters	≥2000 cfm and <u><</u> 4000 cfm	H and (A or F)	Below 2000 cfm airflow R.H. heaters shall be shut off.
3.2/4.2-9	2(7) (8)	Instrument Channel SGTS /low - Train C R. H. Heaters	22000 cfm and <u>≤</u> 4000 cfm	H and (A or F)	Below 2000 cfm airflow R.H. heaters shall be shut off.
	1	Reactor Building Isolation Timer (refueling floor)	0 <u>≤</u> t <u>≤</u> 2 secs. ,	H or F	 Below trip setting prevents spurious trips and system perturbations from initiating isolation.
	1	Reactor Building Isolation Timer (reactor zone)	0 <u><</u> t <u><</u> 2 secs.	G or A or H	 Below trip setting prevents spurious trips and system perturbations from initiating isolation.

1.0 DEFINITIONS (Cont'd)

OCT 2 1 1993

- Simulated Automatic Actuation Simulated automatic actuation means applying a simulated signal to the sensor to actuate the circuit in question.
- Logic A logic is an arrangement of relays, contacts, and other components that produces a decision output.
 - (a) <u>Initiating</u> A logic that receives signals from channels and produces decision outputs to the actuation logic.
 - (b) <u>Actuation</u> A logic that receives signals (either from initiation logic or channels) and produces decision outputs to accomplish a protective action.
- 11. <u>Channel Calibration</u> Shall be the adjustment, as necessary, of the channel output such that it responds with necessary range and accuracy to known values of the parameters which the channel monitors. The channel calibration shall encompass the entire channel including alarm and/or trip functions and shall include the channel functional test. The channel calibration may be performed by any series of sequential, overlapping or total channel steps such that the entire channel is calibrated. Non-calibratable components shall be excluded from this requirement, but will be included in channel functional test and source check.
- 12. Channel Functional Test Shall be:
 - a. Analog/Digital Channels the injection of a simulated signal into the channel as close to the sensor as practicable to verify OPERABILITY including alarm and/or trip functions.
 - b. Bistable Channels the injection of a simulated signal into the sensor to verify OPERABILITY including alarm and/or trip functions.

(De/etcd) 13. Source Check - Shall be the qualitative assessment of channel response when the channel sensor is exposed to a radioactive source (or multiple of sources.

DEC 0 2 1993

1.0 DEFINITIONS (Cont'd)

- GG. <u>Site Boundary</u> Shall be that line beyond which the land is not owned, leased, or otherwise controlled by TVA.
- HN. Unrestricted Ares Any area at or beyond the SITE BOUNDARY to which access is not controlled by the licensee for purposes of protection of individuals from exposure to radiation and radioactive materials or any area within the SITE BOUNDARY used for industrial, commercial, institutional, or recreational purposes.
- II. Dose Equivalent I-131 The DOSE EQUIVALENT I-131 shall be the concentration of I-131 (in μ Ci/gm) which alone would produce the same thyroid dose as the quantity and isotopic mixture of I-131, I-132, I-133, I-134, and I-135 actually present. The thyroid dose conversion factor used for this calculation shall be those listed in Table III of TID-14844 "Calculation of Distance Factors for Power and Test Reactor Sites".
- JJ. <u>Gaseous Waste Treatment System</u> The charcoal adsorber vessels. installed on the discharge of the steam jet sir ejector to provide delay to a unit's offgas activity prior to release. Any individual except when that
- KK. <u>Members of the Public</u> An individual in a controlled or UNRESTRICTED AREA. Envery, an individual is not a MEMBER OF THE PUBLIC during any period in which the individual receives an occupational dose (as defined in 10 CFR 20).
- LL. <u>Surveillance</u> Surveillance Requirements shall be met during the OPERATIONAL CONDITIONS or other conditions specified forindividual limiting conditions for operation unless otherwise stated in an individual Surveillance Requirements. Each Surveillance Requirement shall be performed within the specified surveillance interval with a maximum allowable extension not to exceed 25 percent of the specified surveillance interval. It is not intended that this (extension) provision be used repeatedly as a convenience to extend surveillance intervals beyond that specified for surveillances that are not performed during. refueling outages.

Performance of a Surveillance Requirement within the specified time interval shall constitute compliance and OPERABILITY requirements for a limiting condition for operation and associated action statements unless otherwise required by these specifications. Surveillance Requirements do not have to be performed on inoperable equipment.

BFN Unit 2 AMENDMENT NO. 220

BFN Unit	Minimum No. Instrument Channels Operable per Yrip Sys(1)(11)	Function	Trip Level Setting	Action (1)	Remarks
N	1(14)	Instrument Channel - Reactor Building Ventilation High Radiation - Refueling Zone	≤ 100 mr/hr or downscale	F	 1 upscale channel or 2 downscale channels will a. Initiate SGIS b. Isolate refueling floor c. Close atmosphere control system.

DEC 0 7 1994

SURVEILLANCE REQUIREMENTS

DIMITING CONDITIONS FOR OPERATION

- 3.9.8 Operation With Inoperable Equipment
 - . From and after the date that one of the 250-V shutdown board batteries and/or its associated battery board is found to be inoperable for any reason, continued REACTOR POWER OPERATION is permissible during the succeeding five days in accordance with 3.9 B.7 except as noted in 3.9.B.8.a, b, and c below:
 - a. For the purpose of shutdown board battery and component replacement only, REACTOR.
 POWER OPERATION is permissible for the succeeding forty-five (45) days providing:
 - Only one of the shutdown board batteries and associated components is being replaced at a time.
 - All components normally supplied from the shutdown board battery which is being replaced are fed from its alternate source.
 - 3. Units 1 and 3 are defueled.
 - b. NEC notification for 3.9.B.7 is not required for shutdown board battery and component replacement.

Resumption of REACTOR POWER OPERATION is permissible following a shutdown while shutdown board battery and component replacements are in progress.

From January 1, 1995, to December 31, 1995, the provisions of Specification 3.9.B.8 on this page will apply while modifications are being performed on the shutdown board batteries and/or their associated battery boards.

SURVEILLANCE REQUIREMENTS

LIMITING CONDITIONS FOR OPERATION

3.9.B Operation With Inoperable Equipment

- DELETE
- that one of the 250-V shutdown board batteries and/or its associated battery board is found to be INOPERABLE for any reason, continued REACTOR POWER OPERATION is permissible during the succeeding five days in accordance with 3.9.B.7.

From and after the date

When one division of the 9. logic system is INOPERABLE, continued REACTOR POWER OPERATION is permissible under this condition for seven days, provided the CSCS requirements listed in Specification 3.9.B.3 are satisfied. The NEC shall be notified within 24 hours of the situation, the precautions to be taken during this period, and the plans to return the failed component to an OPERABLE state.

10. (deleted)

11. The following limiting conditions for operation exist for the undervoltage relays which start the diesel generators on the 4-kV shutdown boards.

DELETE

From January 1, 1995, to December 31, 1995, the provisions of Specification 3.9.B.8 on page 3.9/4.9-10a will apply while modifications are being performed on the shutdown board batteries and/or their associated battery boards.

BFN Unit 1

1.0 DEFINITIONS (Cont'd)

- GG. <u>Site Boundary</u> Shall be that line beyond which the land is not owned, leased, or otherwise controlled by TVA.
- HH. Unrestricted Area Any area at or beyond the SITE BOUNDARY to which access is not controlled by the licensee for purposes of protection of individuals from exposure to radiation and radioactive materials or any area within the SITE BOUNDARY used for industrial, commercial, institutional, or recreational purposes.
- II. Dose Equivalent I-131 The DOSE EQUIVALENT I-131 shall be the concentration of I-131 (in μ Ci/gm) which alone would produce the same thyroid dose as the quantity and isotopic mixture of I-131, I-132, I-133, I-134, and I-135 actually present. The thyroid dose conversion factor used for this calculation shall be those listed in Table III of TID-14844 "Calculation of Distance Factors for Power and Test Reactor Sites".
- JJ. <u>Gaseous Waste Treatment System</u> The charcoal adsorber vessels installed on the discharge of the steam jet air ejector to provide delay to a unit's offgas activity prior to release.
- KK. <u>Members of the Public</u> Any individual except when that individual receives an occupational dose (as defined in 10 CFR 20).
- LL. <u>Surveillance</u> Surveillance Requirements shall be met during the OPERATIONAL CONDITIONS or other conditions specified for individual limiting conditions for operation unless otherwise stated in an individual Surveillance Requirements. Each Surveillance Requirement shall be performed within the specified surveillance interval with a maximum allowable extension not to exceed 25 percent of the specified surveillance interval. It is not intended that this (extension) provision be used repeatedly as a convenience to extend surveillance intervals beyond that specified for surveillances that are not performed during refueling outages.

Performance of a Surveillance Requirement within the specified time interval shall constitute compliance and OPERABILITY requirements for a limiting condition for operation and associated action statements unless otherwise required by these specifications. Surveillance Requirements do not have to be performed on inoperable equipment.

BFN Unit 2 1.0 DEFINITIONS (Cont'd)

- <u>Simulated Automatic Actuation</u> Simulated automatic actuation means applying a simulated signal to the sensor to actuate the circuit in question.
- Logic A logic is an arrangement of relays, contacts, and other components that produces a decision output.
 - (a) <u>Initiating</u> A logic that receives signals from channels and produces decision outputs to the actuation logic.
 - (b) <u>Actuation</u> A logic that receives signals (either from initiation logic or channels) and produces decision outputs to accomplish a protective action.
- 11. <u>Channel Calibration</u> Shall be the adjustment, as necessary, of the channel output such that it responds with necessary range and accuracy to known values of the parameters which the channel monitors. The channel calibration shall encompass the entire channel including alarm and/or trip functions and shall include the channel functional test. The channel calibration may be performed by any series of sequential, overlapping or total channel steps such that the entire channel is calibrated. Non-calibratable components shall be excluded from this requirement, but will be included in channel functional test and source check.

12. Channel Functional Test - Shall be:

- a. Analog/Digital Channels the injection of a simulated signal into the channel as close to the sensor as practicable to verify OPERABILITY including alarm and/or trip functions.
- b. Bistable Channels the injection of a simulated signal into the sensor to verify OPERABILITY including alarm and/or trip functions.

13. (Deleted)

3.9.A.3.	(Cont'd)		
	d. The 480-V shutdown boards 2A and 2B are energized.		
	e. The units 1 and 2 diesel auxiliary boards are energized.		
	f. Loss of voltage and degraded voltage relays OPERABLE on 4-kV shutdown boards A, B, C, and D.		
	g. Shutdown buses 1 and 2 energized.		
	h. The 480-V reactor motor- operated valve (RMOV) boards 2D & 2E are energized with motor-generator (mg) sets 2DN, 2DA, 2EN, and 2EA in service.		
4.	The three 250-V unit batteries, the four shutdown board	4.	Undervoltage Relays
	batteries, a battery charger for each battery, and		a. (Deleted)
F	associated battery boards are OPERABLE.		 b. Once every 18 months, the conditions under which the loss of voltage and degraded voltage relays are required shall be simulated with an undervoltage on each shutdown board to demonstral that the

3.9/4.9-6

generator will start.

3.9/4.9 AUXILIARY ELECTRICAL SYSTEM

LIMITING CONDITIONS FOR OPERATION

- 3.9.B Operation With Inoperable Equipment
 - 8. From and after the date that one of the 250-V shutdown board batteries and/or its associated battery board is found to be INOPERABLE for any reason, continued REACTOR POWER OPERATION is permissible during the succeeding five days in accordance with 3.9.8.7.
 - 9. When one division of the logic system is INOPERABLE, continued REACTOR POWER OPERATION is permissible under this condition for seven days, provided the CSCS requirements listed in Specification 3.9.B.3 are satisfied. The NRC shall be notified within 24 hours of the situation, the precautions to be taken during this period, and the plans to return the failed component to an OPERABLE state.

10. (deleted)

11. The following limiting conditions for operation exist for the undervoltage relays which start the diesel generators on the 4-kV shutdown boards.
