- b) Plant Mode 3

#### Event

On 2/14/85, a temperature monitor (LD-TS-600A) in the Leak Detection (LD) system covering the Reactor Water Cleanup (RWCU) pump room #1 spuriously actuated a delta temperature high alarm. This initiated a signal to automatically close RWCU outboard containment isolation valve (RWCU-V-4).

## Immediate Corrective Action

The area involved was inspected and no leaks were observed. The isolation logic was reset and the Reactor Water Cleanup System was returned to service.

## Further Corrective Action

Engineering evaluations have been initiated to find a suitable replacement for the existing LD modules (Riley) which will be less susceptable to external signal noise.

# Safety Significance

There are no safety consequences associated with this event, and all plant systems performed as required during the event. The Leak Detection System is designed to alarm and generate isolation signals in case of process leakage or a pipe break by detecting a temperature rise in an area to be above a desired limit or setpoint. RWCU was isolated without excess process leakage or a pipe break event. The Riley modules are very susceptable to external signals. Field verifications were made and no specific cause could be found for the isolation signal.

LICENSEE EVENT REPORT NO. 85-017

Dear Sir:

Transmitted herewith is Licensee Event Report No. 85-017 for WNP-2 Plant. This report is submitted in response to the report requirements of 10CFR50.73 and discusses the item of reportability, corrective action taken, and action taken to preclude recurrence.

This is the follow-up report to the verbal notification given at 0835 hours on February 14, 1985.

Very truly yours,

J. D. Martin (M/D 927M) WNP-2 Plant Manager
