Gentlemen:

Because of reduced drilling activity in the USA, Schlumberger is experiencing a considerable reduction in wells logged. This has resulted in reduced number of field locations and logging tools. Consequently, our field locations have a number of special form sealed sources for which they have no present need. These sources are still useful and will be needed as well logging increases in the future.

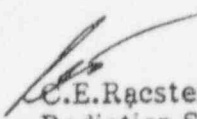

We have entered into a contract with Nuclear Sources & Services, Inc.(NSSI), Houston, Texas, to store a number of these sources. They will continue to be owned by the field location and will be listed on our radioactive source listing at that location, but physically they will be in the custody of NSSI, Houston. By License, NSSI is not required to wipe test sources while in storage, but sources will be wipe tested before return for use at the Schlumberger field location.

Your inspectors may find, when inspecting a Schlumberger field location, that a source on the radioactive source listing will show wipe test overdue. The field location will have documentation showing that the source is at NSSI and no wipe test is required.

If you have any questions, please call me at 713-928-4227.

Sincerely,

20:6V 8Z 030 09.

  
C.E. Ræster
