Bayer Corporation
ATTN: Frank Hinrichs
Radiation Safety Officer
Engineering Department
New Martinsville, WV 26155

SUBJECT: NRC INSPECTION REPORT NO. 47-06773-02/96-01

Dear Mr. Hinrichs:

Thank you for your response of June 4, 1996, to our Notice of Violation, issued on May 6, 1996, concerning activities conducted under NRC License No. 47-06773-02.

Your response to this Notice of Violation should include the reason for the violation, or, if contested, the basis for disputing the violation; and corrective measures to avoid further violations. This is in addition to the information you provided, that of the corrective actions and the date when compliance will be achieved.

We will evaluate your response when this additional information is provided. If you have any questions, please call Ms. Orysia Masnyk Bailey at (404) 331-2687.

Sincerely,

(original singed by
J. P. Potter)

RE: NRC Inspection Report 30-14874/96-01 and NOTICE OF VIOLATION dated May 6, 1996

Dear Sir:

The items described in the NRC Inspection Report cited above were thoroughly investigated and the following responses prepared:

Violation A: 10 CFR 20.1301 (a)(2) requires that the licensee conduct operations so that the dose in any unrestricted area from external sources does not exceed 2 millirem in any one hour.

Contrary to the above on April 3, 1996, licensee operations resulted in doses of 5, 4.8, 39.1, 73.8, and 40.3 millirems respectively, in one hour at 30 centimeters from the gauge at various gauges within the plant in unrestricted areas.

Response: Bayer Corporation has recently taken several new readings in the same areas that were mentioned above. Three separate instruments that had recently been calibrated gave much lower responses than the ones mentioned above (see Attachment 1).

Some of the follow-up readings however, were still above 2 millirems per hour at 30 centimeters from the source. Occupancy studies and task evaluations were then re-evaluated (See Attachment 1). Based on these studies, employee exposure potential is less than 100 mRem/yr. 10 CFR 20.1302(a) allows for radiation levels up to 5 mRem/hr. as long as the exposure potential is less than 100 mRem/yr. None of the readings obtained by Bayer Corporation exceeded 5 mRems/hr. around the source while not directly in the radiation beam. We are confident that employee exposures cannot approach and certainly do not exceed 100 mRems/yr. Therefore we do not believe that dosimetry is required.

-9604100041 13pp.

Regional Administrator
June 4, 1996
Page 2

Response: (cont.) Although all readings obtained by Bayer were within the 5 mRems per hour limit, we did see two areas that we could improve. These areas will have guards extended to further eliminate the potential for hand exposure. These changes in guards will be completed within 30 days.

Violation B: 10 CFR 20.1502(a)(3) requires, in part, that each licensee supply and require the use of individual monitoring devices by adults likely to receive, in one year from sources external to the body, a dose in excess of 10 percent of the limits in 10 CFR 20.1201(a).

Contrary to the above, as of April 3, 1996, the licensee could not demonstrate that an analysis had been performed to determine that the plant workers would not receive a dose in excess of 10 percent of these limits.

Response: As noted in the previous response, the radiation measurements and occupancy studies recently re-evaluated indicate that Bayer employees will not be exposed at or above 10 percent of the limits in 10 CFR 20.1201(a). Please refer to Attachment 1 for the details of the occupancy study, and task evaluations.

Violation C: 10 CFR 20.1801 requires that the licensee secure from unauthorized removal or access licensed materials that are stored in unrestricted areas. As defined in 10 CFR 20.1003, unrestricted area means an area, access to which is neither limited nor controlled by the licensee for the purpose of protection; individuals against undue risks from exposure to radiation and radioactive materials

Contrary to the above, on April 3, 1996, the licensee did not secure from unauthorized removal or limit access to three fixed type gauges which were stored in a warehouse located in an unrestricted area, nor did the licensee control and maintain constant surveillance of this licensed material.

Response: It was our belief that the storage location for the gauges was adequate. This facility was locked at night, and was under supervision during the day. However, in response to the citation and the inspectors comments, an alternate storage location for nuclear level gauge storage has been located. All presently held nuclear materials and future materials shall be stored in this new facility under lock and key. Access to the new area will be strictly limited to authorized personnel. The change in storage location for the nuclear material has already been accomplished.

RADIATION EXPOSURE CALCULATION EXPLANATION

Spreadsheet Column	Value
G	hours per year spent in vicinity of source
H	Distance from source when personnel near source
I	Average radiation (average of readings of top, bottom, left, right and behind)mRem/hr at 1 foot from the source
J	Exposure from source per year at approach distance

$$\text{Exposure / yr} = I \times (1 / H \times H) \times G$$

Example:

G	H	I	J
HR/YR NEAR SOURCE	DISTANCE FROM SOURCE ft.	AVG RADIATION AT 1 FOOT mRem/hr	RADIATION AT NORMAL DISTANCE mRem/yr
1.75	10	3.8	0.0665

$$\text{Exposure/yr}=3.8 \times (1/10 \times 10) \times 1.75$$

$$\text{Exposure/yr}=.0665 \text{ mRem/yr}$$
