U. S. Nuclear Regulatory Commission  
Region IV  
Suite 1000  
611 Ryan Plaza Drive  
Arlington, TX 76012

Gentlemen:

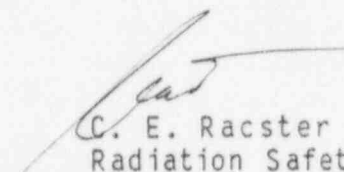

This is to confirm our telephone call of November 12, 1985 with Mr. Chuck Cain and to report the permanent abandonment of a 16 curies AmBe sealed source (NSR-F-A1427) and a 1.5 curie Cesium 137 (GSR-J-7254) in the well described below.

Union Oil of California  
OCS-G 2648 #A-24-ST #2  
API # 60 804 40097  
East Breaks 160  
Offshore, Texas  
Total Depth - 13,922 feet

The sealed sources are located at 13,379 feet, with the fishing tools, jars and drill collars stuck above the sources up to a depth of 13,155 feet. A cement plug was placed from 13,150 to 12,200 feet. The plug will be drilled out to 12,450 feet and the well sidetracked at 12,450 feet. The drilling of the sidetrack hole will be controlled to maintain a distance of at least 100 feet from the sources.

An appropriate plaque will be provided to Union Oil of California for attachment to the wellhead.

Sincerely,

  
C. E. Racster  
Radiation Safety Officer
