Washington, D.C. 20555

Subject: Docket Nos. 50-361 and 50-362  
Monthly Operating Reports for July  
San Onofre Nuclear Generating Station Units 2 and 3

Technical Specification 6.9.1.10 to Facility Operating Licenses NPF-10 and NPF-15 for the San Onofre Nuclear Generating Station, Units 2 and 3, respectively, requires SCE to provide a Monthly Operating Report for each Unit, which includes: routine operating statistics and shutdown experience; all challenges to safety valves; any changes to the Facility Dose Calculation Manual (FDCM); and any major changes to the radioactive waste treatment system. All covered activities are reported monthly, except for FDCM changes, which are reported within 30 days from the time the changes were made effective.

This letter transmits the July 1992 Monthly Operating Reports for Units 2 and 3, respectively. There were no challenges to safety valves, no changes to the FDCM, and no major changes to the Units 2 and 3 radioactive waste treatment systems during the reporting period.

Attachment A to the enclosure provides a revised "Unit Shutdowns and Power Reductions" sheet for the May 1992 Monthly Operating Report to correct the "Duration (Hours)" of a forced unit shutdown. The Unit 3 "Operating Status" sheets for the May and June 1992 Monthly Operating Report have been revised accordingly and are included in this attachment. The affected portions of the sheets are appropriately noted.

If you require any additional information, please let me know.

Very truly yours,

Enclosures
