Wichita, Kansas 67201

Gentlemen:

This refers to the routine safety inspection conducted by Messrs. M. J. Farber, D. L. Williams, W. G. Guldemond, and Ms. M. L. McCormick-Barger of the Region III NRC office during the period October 1-31 and November 1-30, 1984, of activities authorized by NRC Construction Permit CPPR-147 for the Wolf Creek Generating Station, and to the discussion of our findings with you and Messrs. F. T. Rhodes and R. B. Glover and others of your staff at the conclusion of the inspection.

Areas examined during the inspection included licensee action on previous inspection findings, preoperational test procedures, preoperational test performance, preoperational test result package evaluations, preoperational test procedure verification, preoperational test results verification, startup test procedure reviews, voiding of completed preoperational tests, preoperational test schedule, technical specification review, and preoperational test content. Within these areas, the inspection consisted of a selective examination of procedures and representative records, interviews with personnel, and observations by the inspectors. These findings are documented in the enclosed inspection report.

During this inspection, certain of your activities appeared to be in noncompliance with NRC requirements. These items are detailed within the inspection report and were a topic of discussion at an enforcement conference held on December 4, 1984. Enforcement action based on the findings of this inspection will be discussed in inspection report 50-482/84-57. This inspection report is being forwarded for your information. A written response to the specific findings of this report is not required.
