Rancho Seco Nuclear Station
License No. DPR-54

RANCHO SECO DEFUELED SAFETY ANALYSIS REPORT

Attention: Seymour Weiss

Based on a telephone meeting between the District and NRC staff on July 30, 1992, the District submits the Rancho Seco Defueled Safety Analysis Report (DSAR) at this time. The DSAR reflects Rancho Seco's permanently shut down status and the numerous exemptions, waivers, and license amendments (e.g., Possession-Only License and Permanently Defueled Technical Specifications) implemented through at least April 30, 1992.

The DSAR represents the licensing basis for the operation of the shut down Rancho Seco nuclear facility during the Permanently Defueled Mode (PDM). The DSAR replaces the Updated Safety Analysis Report (USAR) (through Amendment No. 8) as the primary licensing basis document applicable to the operation of Rancho Seco during the PDM.

The District will periodically update the DSAR (at least once every two years) to provide an updated licensing basis for the operation of Rancho Seco in the PDM. Subsequent DSAR changes shall be considered revisions to the DSAR and numbered, starting with Amendment No. 1. DSAR revisions shall include a page change identification table and change indicator lines in the areas where changes occurred.

The DSAR provides a Safety Analysis Report that supports the long-term safe storage and handling of irradiated fuel assemblies. The DSAR provides assurance, based on the spent fuel storage and handling systems and components and the administrative controls and programs described within the DSAR, that no undue risk to the public health and safety will occur during normal PDM operations and credible postulated accident conditions.
