Mr. James Wilson, Project 669  
U. S. Nuclear Regulatory Commission  
Washington, DC 20555

Subject: **High Frequency Seismic Effects**

Dear Mr. Wilson:

Attached is a draft report concerning high frequency seismic effects. Within approximately the next six weeks, we expect to submit this work as an EPRI report in support of the ALWR Utility Requirements Document. We are sending this draft version since we expect little or no technical change as it is converted to a final report and since it may be of use in the continuing dialogue in this area between industry and the NRR.

Please contact John Trotter if you have any questions.

Sincerely,

George Bockhold Jr.  
Senior Manager  
Advanced LWR Program
