Re: Nine Mile Point Unit 2
Docket No. 50-410
NPF-69

Gentlemen:

Niagara Mohawk hereby transmits an Application for Amendment to Nine Mile Point Unit 2 Operating License NPF-69. Also enclosed as Attachment A are the proposed changes to the Technical Specifications as set forth in Appendix A of the Nine Mile Point Unit 2 Operating License. Pursuant to 10CFR50.92, supporting information and an analysis demonstrating that the proposed changes involve no significant hazards consideration are included as Attachment B.

The proposed Technical Specification changes are to Tables 3.3.7.2-1, Seismic Monitoring Instrumentation, and 4.3.7.2-1, Seismic Monitoring Instrumentation Surveillance Requirements. Tables 3.3.7.2-1 and 4.3.7.2-1 list the unit's seismic monitoring instruments, the sensor locations, and surveillance test frequencies. By this amendment, a triaxial peak accelerograph previously listed as located on a reactor recirculation pump motor will now be listed at its new location on the reactor pedestal.

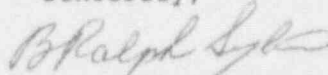

The accelerograph was moved to avoid background noise caused by normal vibration of the pump motor. Maintenance and surveillance test results recorded at the new location during two 1991 outages and the 1992 refueling outage have been acceptable. We conclude, therefore, that this triaxial peak accelerograph can be returned to operable status with your approval of this amendment.

A copy of this license amendment request and the associated analysis of no significant hazards consideration have been provided to the appropriate State representative according to 10CFR50.91(b)(1).

Sincerely,

B. Ralph Sylvia

Exec. Vice President-Nuclear
