Subject: McGuire Nuclear Station, Units 1 and 2  
Docket Nos. 50-369 and 50-370  
Proposed Technical Specification Amendment  
Diesel Generator 18-Month Surveillance Mode  
Restrictions (TS 4.8.1.1.2.e)

- Reference: 1) H.B. Tucker to NRC letter dated  
February 10, 1989, same subject
- 2) T.C. McMeekin to NRC letter dated  
April 30, 1992, same subject
- 3) T.C. McMeekin to NRC letter dated  
November 16, 1992, same subject

Dear Sir;

A Technical Specification (TS) Amendment request to modify certain 18-month diesel generator Surveillance Requirements (SRs) for McGuire Nuclear Station was submitted by a letter dated February 10, 1989. The request was to allow for certain SRs currently required to be done during an outage, to be performed during power operation. Our basis for this request was to allow for greater scheduling flexibility with no impact on the safe operation of the unit. The initial TS Amendment request was supplemented by my letters dated April 30 and November 16, 1992.

Attached is TS page 3/4 8-6, which replaces the same page that was provided by my November 16, 1992 letter. This new page corrects an error within the same page that was previously submitted, in that it adds the phrase "during shutdown" to TS 4.8.1.1.2e.15).
