NRC STAFF RESPONSE TO INTERVENCRS' MOTION TO CONSIDER CLASS 9 ACCIDENTS

INTRODUCTION

Intervenors, Rowena E. Roberts, et al., have moved the Atomic Safety and Licensing Appeal Board in this proceeding to enter an order requiring the NRC Staff to prepare a supplement to the FES which considers the environmental consequences of Class 9 accidents at St. Lucie or which justifies why such consideration should not be given and, in addition, to establish prehearing and hearing procedures for determining the adequacy of such a supplement. In the alternative, Intervenors ask: that further proceedings be stayed until the NRC Staff makes the recommendations called for by the Commission in <u>Offshore Power Systems</u>, 1/ or that the Appeal Board certify to the Commission the questions arising from the application of the Commission's decision to these proceedings.

the second of the Appeal Board to consider the motion; (2) other avenues of relief available to the Intervenors within the Commission (in the event it is concluded that the Appeal Board lacks jurisdiction); and (3) the merits of the arguments raised in the motion. (Tr. 868)

The NRC Staff believes that the Appeal Board is without jurisdiction to grant the requested relief. Other appropriate relief is available to Intervenors. They can address a request for relief to the Director of the Office of Nuclear Reactor Regulation pursuant to 10 CFR § 2.206, they can petition to participate in the operating license proceeding when it is noticed, or they can participate in the rulemaking proceeding which the Commission has indicated its intent to conduct. In any event, the arguments raised by Intervenors are insufficient to require further inquiry into the environmental consequences of Class 9 accidents at St. Lucie as a part of the currently pending proceeding.

DISCUSSION

<u>The Appeal Board is Without Jurisdiction to Grant the Reduested Relief</u>. Stober 7, 1977 the Appeal Board affirmed the Licensing Board's Initial Iscision authorizing the Director of Nuclear Reactor Regulation to issue a construction permit for St. Lucie Unit 2 at Florida Power and Light's Hutchinstr Island site on Florida's east coast.^{2/} However, jurisdiction was retained

is the set of the second se

In their present motion the Intervenors have not attempted to demonstrate that there is a particular Class 9 accident related to grid stability or radon. Rather, citing the Appeal Boards' <u>Peach Bottom</u> decision, they have chosen to argue that since the Commission's <u>Offshore Power Systems</u> decision was rendered prior to the relinquishment of all jurisdiction by this Board, "...it is appropriate for this Appeal Board to retain jurisdiction to dispose of the factual and legal issues." $\frac{5}{}$

Intervenors' reliance on <u>Peach Bottom</u> is misplaced. In that case the Appeal Boards were implementing a Commission directive to consider a specific issue in all proceedings "still pending before Licensing or Appeal Boards".^{6/} The Commission specifically required that "[w]here cases are pending before Appeal Boards, the Appeal Boards are also directed to reopen the records to receive new evidence on racon releases and on health effects resulting from

- 6/ Peach Bottom, supra. p. 799.

.

e 3. e.

^{3/} The grid issue was retained as the result of an October 28, 1977 order amending ALAB-435. The Board also has jurisdiction over radon releases as in other cases purchast to a Commission directive contained in 43 Fed. Reg. 15613 (2001) 14, 1978).

^{4/} ALAB-537, 9 NRC 407 (1979).

In finally pactical and a static traditional factor of the final state of the final state. The <u>Perch Sottor</u> Arcsel Boards specifically rejected entry unts that their jurisdiction did not attach in cases where limited issues remained before it, noting the grant of jurisdiction in the Commission's Order.^{8/}

Unlike <u>Peach Bottom</u>, the Commission's <u>Offshore Power Systems</u> decision contains no special grant of jurisdiction to Licensing Boards or Appeal Boards to consider Class 9 accidents in pending cases. In <u>Black Fox</u>, the Appeal Board specifically noted this fact stating: "...[T]he Commission has reserved to itself the right to decide whether such matters are to be considered in any given case until it adopts a new general policy."^{2/} The NRC Staff does not believe that <u>Offshore Power Systems</u> affects the proposition that boards can admit Class 9 contentions where an affirmative showing is made pursuant to existing rules that other accident assumptions may be more suitable than those described in the proposed annex to Appendix D to 10 CFR Part 50. [36 Fed. Reg. 22851 (1971)] This, of course, leaves Intervenors' motion subject to the applicable rules and case law which govern jurisdiction of the Boards

7/ 43 Fed. Reg. 15613, 15615 (April 14, 1978).

8/ Peach Bottom, p. 802 n. 4.

The applicable case law governing Intervenors' motion is set forth in <u>Fublic</u> <u>Service Company of New Hampshire, et al</u>. (Seabrook Units 1 and 2), ALAE-513, 8 NRC 694 (1978). There the Appeal Board held that it lacked authority to reopen the record on an issue to which finality had attached even though it still retained before it a discrete issue in the proceeding. $\frac{11}{}$

Intervenors' effort to raise the Class 9 issue in this proceeding has been previously rejected by the Licensing and Appeal Boards and their appeal of that decision has been denied in the courts. $\frac{12}{}$ Likewise, a motion to reopen the record would be inappropriate because the appellate process has been completed and the decision in this proceeding is final except for the limited issues of grid stability and Table S-3 (radon) over which jurisdiction has been retained.

2. Other Avenues of Relief.

The usual response to a party seeking to reopen a record in a docket where a final decision has been rendered and appellate jurisdiction terminated is that the party has recourse to the provisions of 10 CFR § $2.206.\frac{18}{}$ Those

16/ 44 Fed. Reg. 58559 (October 10, 1979).

in the processings in a

17/ Intervenors suggest as an alternative that the Appeal Board may wish to certify to the Commission as "major or novel" the questions of Offshore Power Systems' applicability to St. Lucie pursuant to 10 CFR § 2.785(d). Such a course is not warranted here where the questions are not major or no.21. In Black Fox, supra, slip op. p. 32, where the Appeal Board, stopping short of certification, directed the NRC Staff to inform the Commission whether it believed the consequences of Class 9 accidents should be considered in that ongoing proceeding, the Licensing Board to spill in the process of conducting the safety hearings and unlike 1. Die, no final decision has been rendered on the merits. In Black For. therefore, a substantive change in policy on Class 9s might have a "rejor" impact on the ongoing proceeding. Such considerations are isable in St. Lucie where the record is closed, the decisions are Finite unreviewable and the Appeal Board has only narrow and discrete assume the fore it. The question is of course not "novel" since the Octassion is well aware of its action in Offshore Power Systems and Intervenors have pointed to nothing making St. Lucie strikingly different from other land-based reactors.

18/ Sec e.c., Marble Hill, supra, p. 262.

For its operating license. $\frac{19}{}$ By that time the rulemaking noted in Intervenors' motion probably will have specified what environmental considerations should be given to Class 9 accidents and the parties including Intervenors will be in a better position to address such contentions in the St. Lucie proceeding.

こうしゃ かいる おおからからい ション・パート 一般ない ないみ しきれんしょう し

Intervenors also have available to them an effective avenue of relief, <u>viz</u>, the opportunity to participate in the rulemaking which the Commission, in <u>Offshore Power Systems</u>, announced it would conduct. In the rulemaking forum Intervenors will have an effective opportunity to argue their point of view on Class 9 accidents to the Commission.

3. The Merits of Intervenors' Arguments on Class 9s

Intervenors' motion does not attempt to formulate a specific Class 9 contention. Assuming for argument that the Commission's <u>Offshore Power Systems</u> decision signals an intent to paratit consideration of Class 9 accidents in individual licensing proceedings, it manifestly does not presently permit such consideration unless the remainments of existing regulations and case law are met as indicated in <u>Midlanc</u> and <u>Susequehanna</u>, <u>supra</u>, or unless the

^{19/} See, in this regard, the reminder in ALAB-537, supra, p. 411 where this Board noted the further opportunity presented by the filing of an OL application.

fun case. Condequantly, interveronal fictor is cufated where any second strategy of the sec

The NRC Staff is mindful, however, of the <u>Black Fox</u> Appeal Board's direction to inform the Commission of the Staff's view as to whether Class 9 accidents ought to be considered in that proceeding. It is the NRC Staff's position that the Commission's <u>Offshore Power Systems</u> decision does not require the Staff to inform the Commission of individual cases in which the Staff does not believe Class 9 accidents should be considered. While the NRC Staff has not identified St. Lucie to the Commission as a case in which Class 9 accidents should be considered pending the adoption of an interim rule and subsequently the Commission's revised policy and rules, there are a number of ongoing matters which may ultimately bear on this issue.

First, the NRC Staff has not considered <u>St. Lucie</u> as a case within the meaning of the Commission's direction in <u>Offshore Power Systems</u> because that decision was issued in October at a time when the construction permits for <u>St. Lucie</u> had already issued and the matters pending before the Appeal Board were limited in scope. Intervenors' Class 9 contention had already been finally rejected by the Commission and the federal courts.

its into a contracted suggest consideration of linearly cluber at a frequency from that unich would be accorded other land based reactors. Dased on a preliminary assessment, no such circumstances can now be identified. Consequently, current Commission policy on Class 9 accidents embodied in the proposed "annex" to former Appendix D of 10 CFR Part 50 [36 Fed. Reg. 22851 (1971)] is applicable. However, the task action plans contained in Draft NUREG-0660 (TMI Lessons Learned) proposed to the Commission identify Task Action III.E.1.4 as liquid pathway interdiction (an in-depth study of one of the special factors identified in Offshore Power Systems which might trigger further consideration of Class 9 events). Assuming approval of this plan, St. Lucie would be analyzed as part of Task Action Plan III.E.1.4. If that should result in the liquid pathway being identified as a unique consideration at St. Lucie and the Commission's interim policy on Class 9 accident consideration has not yet clarified the situation in this regard, the NRC Staff will promptly inform the Commission and this Board pursuant to the Offshore Power Systems direction.

CONCLUSION

For the foregoing reasons, the NRC Staff believes the Appeal Board lacks jurisdiction to grant Intervenors' motion. Alternative forms of relief are available to Intervenors by petitioning pursuant to 10 CFR § 2.206, by participating in the proposed Commission rulemaking when it is noticed, or
