J. A. BERNARD, JR.
 Director of Reactor Operations

December 22, 1992

U.S. Nuclear Regulatory Commission,
 ATTN: Document Control Desk
 Washington, D.C. 20555

Subject: Response to Request Dated 12/01/92 for Additional Information (TAC No. M82958) Concerning Generation of Medical Therapy Facility Beam for Human Therapy, License No. R-37, Docket No. 50-20

Gentlemen:

The Massachusetts Institute of Technology hereby submits, in their entirety, revised copies of proposed MITR Technical Specification No. 6.5, "Generation of Medical Therapy Facility Beam for Human Therapy" and "Quality Management Program for Generation of MITR-II Medical Therapy Facility Beam for Human Therapy." Also enclosed is the last page of existing Specification No. 7.13, "Plant Reporting Requirements." The revisions in these documents, which are denoted by italicized print, were made in response to the letter of 1 December 1992 from Mr. Alexander Adams, Jr. (Project Manager NRR/PDNP) to Dr. John A. Bernard (Director of Reactor Operations, MIT). All changes requested in that letter have been made. It would be most appreciated if issuance of this amendment could be done as expeditiously as possible.

The enclosed documents were reviewed and approved by the MIT Reactor Safeguards Committee on 12/21/92.

Sincerely,

John A. Bernard
 John A. Bernard, Ph.D.
 Director of Reactor Operations
 MIT Research Reactor

JAB/gw
