

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20555

JUN 6 1985

Docket No. 50-440

The Cleveland Electric Illuminating Company  
ATTN: Mr. Murray R. Edelman,  
Vice President, Nuclear Group  
P. O. Box 5000  
Cleveland, OH 44101

Gentlemen:

Subject: Integrated Design Inspection 50-440/84-29, Supplement 2

The Office of Inspection and Enforcement conducted a follow-up reinspection to the Perry Integrated Design Inspection at the NRC offices and Gilbert/Commonwealth offices on May 9 and 10, 1985. The reinspection team was composed of personnel from the Office of Inspection and Enforcement and consultants. The purpose of the reinspection was to assess the adequacy of corrective actions pertinent to fifteen items which remained open subsequent to the team's reinspection conducted February 27 through March 1, 1985. Your letter dated April 15, 1985 provided additional information in response to the earlier reinspection.

The enclosed report indicates that no IDI items remain open. However, the Region will follow-up to monitor items such as testing for the emergency service water pumps for water hammer (D2.1-3) and reverse rotation (D2.1-6), and implementation of design and hardware changes associated with items D5.4-1 and D5.7-3. Our close-out actions are based on your evaluations in response to the original IDI concerns. These evaluations have in some cases identified the need for design/hardware changes. In addition, this report and the earlier reinspection report (3/26/85) noted that Gilbert and Cleveland Electric documentation has been originated pertinent to potential design and hardware changes and possible reportable events associated with IDI items. It is expected that further actions on these issues also will be properly controlled and executed.
