U. S. Nuclear Regulatory Commission  
Attention: Document Control Desk  
Washington, D.C. 20555

Gentlemen:

Subject: Three Mile Island Nuclear Station Unit 1, (TMI-1)  
Docket No. 50-289  
Operating License No. DPR-50  
GPU Nuclear Schedule for Responding to NRC Request for  
Additional Information Regarding Generic Letter (GL) 90-06,  
'Resolution of Generic Issue 70, 'Power-Operated Relief  
Valve and Block Valve Reliability,' and Generic Issue 94,  
'Additional Low-Temperature Overpressure Protection for  
Light-Water Reactors.' pursuant to 10 CFR 50.54(f)."

GPU Nuclear responded to Generic Letter 90-06 in a letter dated December 24, 1990. The NRC staff reviewed that response and in a letter dated October 29, 1992 provided comments regarding testing of the Power-Operated Relief Valve (PORV) and the incorporation of model Technical Specifications. Because the application of model Technical Specifications is a generic issue, the NRC comments affect the other B&W operating plants as well. Therefore, the B&W Owners Group (BWOOG) Technical Specifications Committee has undertaken an initiative to respond as an owners group. A telephone conference call involving the BWOOG utilities and the NRC staff was held on December 17, 1992. As a result of that discussion, a BWOOG response addressing the model Technical Specification issue is being prepared with TMI-1 participation.

GPU Nuclear has discussed a schedule for responding to the recent NRC comments with the TMI-1 NRC Senior Project Manager, Mr. R. W. Hernan. GPU Nuclear understands that the NRC will consider an extension of the 60 day response

schedule requested by their letter. Based upon the schedule of the BWO, we intend to provide a response to the NRC's request for additional information by February 1, 1993.

Sincerely,

T. G. Broughton  
Vice President and Director, TMI-1
