Dear Mr. Winship:

Pursuant to your recent request for data pertaining to any antitrust license conditions attached to the Clinton Power Station (Docket No. 50-461), I am forwarding to you a copy of the antitrust license conditions attached to the Clinton 1 construction permit (any conditions attached to the construction permit are also attached to the operating license) as well as a publication entitled, "The Conditioning of Licenses--The U.S. Nuclear Regulatory Commission's Antitrust Review of Nuclear Power Plants." (Note pages 28 and 64 per your interest.)

As background to our Clinton Power Station operating license review, I am also forwarding to you a copy of the staff's original "Finding of No Significant Antitrust Changes" analysis completed in early 1982. Staff is presently updating this analysis given the change in fuel load dates for Clinton from January of 1983 to the present fuel load scheduled for January of 1986. Additionally, as a means of better understanding how the Commission's antitrust mandate fits into the overall licensing process, I have enclosed a recent publication entitled "Procedures for Meeting NRC Antitrust Responsibilities."

If you have any additional questions or clarifications as a result of the enclosed data, feel free to contact me.

Sincerely,

*WJ*
