SUBJECT: NSP, MONTICELLO, MINNESOTA NUCLEAR PLANT NO. 1 - ACRS SUBCOMMITTEE MEETING
DOCKET NO. 50-263

DATE: January 17, 1967

Al Ward, Northern States Power, telephoned today, January 17, 1967 to confirm the February 3, 1967 ACRS Subcommittee Meeting date and meeting with the DRL staff on February 2, 1967. I confirmed the dates but cautioned that these were tentative. He will be notified when the agenda for the meeting, i.e., what aspects of the design, fabrication and field erection of the reactor vessel are of most interest, and the date have been finally fixed. I took the opportunity, having tried to reach D. McElroy yesterday by telephone, to read to him highlights from the consultants' report and our own review. Stress analysis, non destructive testing and welding were the main subjects that were covered with our general view being that more information and improved techniques are required to obtain improved quality of reactor vessel.
