ECCS ACTUATION INSTRUMENTATION OPERABILITY
(NRC TAC NOS. M35018 AND M85019)

Gentlemen:

By letter dated November 16, 1992 (Serial No. NLS-92-296), Carolina Power & Light Company (CP&L) submitted a request to allow a one-time revision to the Technical Specifications for the Brunswick Steam Electric Plant (BSEP), Unit Nos. 1 and 2. The proposed amendment will allow the minimum number of operable channels for one reactor steam dome pressure - low instrumentation trip system to be temporarily reduced from two (2) channels to one (1) channel. This will allow, on three separate occasions, one reactor steam dome pressure - low (injection permissive) channel to be placed in the inoperable status for up to seven days without invoking ACTION statement requirements. This one-time revision to the Technical Specifications is needed to support modifications to upgrade the seismic qualification of instrument racks H21-P009 (Unit 2 only) and H21-P010 (Unit 1 and Unit 2).

Enclosure 1 provides page change instructions for incorporating the proposed revisions into the Technical Specifications. Typed Unit 1 and Unit 2 Technical Specification pages are provided herein as Enclosures 2 and 3, respectively.

Please refer any questions regarding this submittal to Mr. D. B. Waters at (919) 546-3678.

Yours very truly,

R. B. Starkey, Jr.

WRM/wrm (nls93012.wpf)
