J. A. McBride, Director  
Division of Materials Licensing

Southern Space, Incorporated, Decontamination Laundry License

This is to inform you that we have ready for issuance a byproduct material license for Southern Space, Incorporated, for a new decontamination laundry facility at Portsmouth, Virginia. We have evaluated facilities and equipment and the safety aspects of the proposed laundry program and have concluded that there is reasonable assurance that the health and safety of the public will not be endangered. The license contains a condition requiring installation of all facilities and equipment described in the application and inspection of the completed facilities and equipment by the Atomic Energy Commission prior to receipt of contaminated laundry by the licensee. The Division of Compliance has been alerted to the preoperation inspection requirement and agrees with the procedure.

bcc: Standard Dist.
