Outten called the writer today requesting more data on the film badge results noted for four of the American Potash Co. employees during recent inspection visit.

It appeared that a recent memo submitted by Davis mentioned two of these film badges to be contaminated. Outten wanted to know how these were contaminated. Since the writer was unable to give this information, Outten suggested that Davis call him at his earliest convenience.

Outten wanted to know if the memo was submitted purely from an informational standpoint so that Compliance would be put on notice of these film badge results when the inspection report now being prepared would be submitted to Headquarters for review and action. The writer told Outten that in his opinion that this appeared to be the case in this instance.
