INTRODUCTION

Pursuant to Technical Specification 6.9.6, this special report is submitted as required by Technical Specification 4.4.10.5.b.

A steam generator tube inservice inspection was performed in accordance with the surveillance requirements of Technical Specification 3.4.10 during April/May of 1984. Based on a rotating selection schedule, steam generator #4 was inspected to satisfy the Technical Specifications. In addition, a cold leg baseline inspection was performed in steam generators #2, 3, and 4. The existence of cold leg defects was discovered in steam generator #1 during the 1982 refueling outage and at that time Yankee committed to perform a cold leg baseline inspection in the remaining steam generators. The results of this inspection program satisfy that commitment, reference (b).

The Yankee Plant has four vertical U-tube steam generators. Each steam generator contains 1620 tubes. The tubes are type 304 stainless steel, 3/4 inch O.D. and 0.072 inch average wall thickness.

REFERENCES

- A. YAEC letter to USNRC, dated May 25, 1984 (FYR 84-60).
- B. USNRC Inspection 50-29 / 82-12, December 23, 1982.

RESULTS

The initial results of this inservice inspection, along with our justification for the program performed is documented in reference (a).

Table I of this report updates the overall results presented in reference (a). A detailed description of the testing done in each steam generator is as follows:

Steam Generator #4

A tube inspection in accordance with Technical Specification 4.4.10.4.a.8. was performed. The degraded/defective tubes from this inspection result in category C-2 as documented in reference (a). In that this first sample included ~ 100% of the tubes, a second sample selection was not required. A total of 1536 tubes were inspected, with 43 tubes previously plugged and 41 tubes not inspected due to the presence of template plugs or inaccessibility.

In addition to the Technical Specification required hot leg inspection program, the new cold leg baseline inspection program was also applied to steam generator #4.

The location and percent of wall thickness penetration for each indication of an imperfection is contained in Attachment I. Identification of tubes plugged is contained in Attachment II.

Steam Generator #2

As part of the cold leg baseline program, steam generator #2 was inspected. A total of 1592 tubes were inspected, with 9 tubes previously plugged and 19 tubes not inspected due to the presence of template plugs or inaccessibility. While the cold leg baseline program was successful, it was discovered that it was not possible to obtain eddy current results on the hot leg side tubes from the tube sheet to the second tube support plate. This is apparently due to the buildup of magnitite on the interior of the tubes in sufficient quantity to cause interference with the eddy current signal. A solution to this problem is being pursued.

The location and percent of wall thickness penetration for each indication of an imperfection is contained in Attachment I. Identification of tubes plugged is contained in Attachment II.

Steam Generator #3

As part of the cold leg baseline program, steam generator #3 was inspected. A total of 1551 tubes were inspected, with 21 tubes previously plugged and 48 tubes not inspected due to the presence of template plugs or inaccessibility.

The location and percent of wall thickness penetration for each indication of an imperfection is contained in Attachment I. Identification of tubes plugged is contained in Attachment II.

Table I

| <u>Steam Generator</u> | <u>Degraded Tubes < 40%</u> | <u>Defective Tubes ≥ 40%</u> | | <u>Defective Tubes to date</u> | |
|----------------------------|------------------------------------|----------------------------------|----------------|------------------------------------|----------------|
| | | <u>Cold Leg</u> | <u>Hot Leg</u> | <u>Cold Leg</u> | <u>Hot Leg</u> |
| #2 (1984) | 11 | 35 | * | 35 | 9 |
| #3 (1984) | 6 | 56 | 4 | 56 | 25 |
| #4 (1984) | 11 | 12 | 7 | 12 | 50 |
| #1 (1982) | | 5 | 4 | 5 | 47 |

* Hot leg inspection in steam generator #2 was not completed due to magnitite interference.

NOTE: In addition to the defective tubes, five degraded tubes plus four tubes with restrictions that prevented inspection were also plugged.

SUMMARY OF
EDDY CURRENT TERMS AND ABBREVIATIONS

- * PLANT - SELF EXPLANATORY
- * UNIT - SELF EXPLANATORY
- * S/G - STEAM GENERATOR
- * INLET/OUTLET - SIDE FROM WHICH INSPECTION WAS PERFORMED
- * REEL - DATA REEL NUMBER AS IDENTIFIED ON MAGNETIC TAPE AND/OR CHART PAPER
- * SIDE - SIDE #1 OR #2 IF APPLICABLE, OTHERWISE BLANK
- * DATE - DATE OF DATA COLLECTION
- TUBE ID - TUBE IDENTIFICATION ROW# COLUMN# OR OTHER METHOD
- FROM - THE SIGNAL SOURCE FROM WHICH THE EVALUATION WAS MADE
 - (BLANK) INDICATES THAT THE PRIMARY TEST FREQUENCY WAS USED
 - "U" " " " " UPPER MIXER SIGNAL " "
 - "L" " " " " LOWER MIXER SIGNAL " "
- VOLTS P-P - PEAK TO PEAK VOLTAGE OF THE INDICATION SIGNAL
- CURRENT - THE CURRENT PERCENT THROUGH WALL INDICATION AS EVALUATED
- ORIGIN - THE ORIGIN OF THE REPORTED SIGNAL
 - "OD" INDICATES THE SIGNAL ORIGIN TO BE FROM THE OUTSIDE DIAMETER
 - "ID" " " " " " " " " INSIDE DIAMETER
- LOCATION - THE AXIAL LOCATION OF THE INDICATION
- INDEX - THE TAPE INDEX OF THE REPORTED INDICATION
- PAGE OF - PAGE NUMBER OF EDDY CURRENT TEST RESULTS
 - EACH REEL OF DATA SHOULD BEGIN WITH PAGE #1
- * EVALUATOR - SIGNATURE OF DATA EVALUATOR
- * NDE LEVEL - CERTIFICATION LEVEL OF DATA EVALUATOR
- * DATE - DATE OF DATA EVALUATION
- (*) - THESE ITEMS NEED ONLY BE COMPLETED FOR THE FIRST DATA PAGE FROM EACH REEL

TYPES OF ABBR'VIATIONS USED

- ✓ - WHEN USED IN THE "CURRENT" COLUMN, THIS DENOTES THAT NO DETECTABLE INDICATIONS WERE FOUND
- PV - PERMEABILITY VARIATION, NOT A REPORTABLE INDICATION
- CU - COPPER LIKE DEPOSITION, NOT A REPORTABLE INDICATION
- DTS - DISTORTED TUBE SHEET SIGNAL
- EP - EXPLOSIVE PLUG (AS REPORTED ON MAGNETIC TAPE OR CHART PAPER)
- MP - MECHANICAL PLUG " " " " " " " " "
- WP - WELDED PLUG " " " " " " " " "
- ATE - ABOVE TUBE END
- TTS - TOP OF TUBE SHEET
- ATS - ABOVE TUBESHEET
- TSP - TUBE SUPPORT PLATE
- BAF - BAFFLE
- E/C - EGG CRATE
- AVB - ANTI VIBRATION BAR
