Mr. Christopher Brown
United States Nuclear Regulatory Commission
Office of Nuclear Material Safety and Safeguards
Washington, D.C. 20555-000

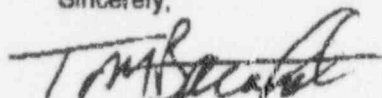

Dear Mr. Brown:

Per our telephone conversation this morning, our smoke alarms outer dimensions range from 4 to 5 inches in circumference and 1 to 1.5 inches in height. The circuit board is common between all models with exceptions of added space for additional features, i.e., escape light in one model, alarm silence features, etc.

I want to emphasize that the circuitry and the internal construction, where the americium source is contained, is identical in all models.

Also as I mentioned earlier, Seatt Corporation has gone through an ownership change which led to a change in the company name. The new company name is Coleman Safety and Security Products, Inc. I want to assure you that this transition will not affect our operating procedures or commitment made to the Nuclear Regulatory Commission. We will continue to meet all existing requirements.

Sincerely,

Tom Barakat
Radiation Safety Officer
