Mr. Lyall Johnson
Licensing Division
U. S. Atomic Energy Commission
Washington, D.C.

RE: Source Material License
No. C-2734

Dear Mr. Johnson:

Our source material license is due to expire November 1, 1958. We request that this license be extended for a three year period and that all previous amendments to our license be likewise extended. It is requested that this license permit us to transfer and deliver possession of and/or title to source material to any person licensed by the Atomic Energy Commission within the limits of his license. Accurate records of all source material received and shipped are maintained by the Special Metals Division at the Hematite, Missouri plant.

Our source material research and development program is conducted principally in an especially constructed and equipped laboratory at our Hematite facility.

Our analytical work is carried on at the main analytical laboratory at the St. Louis plant. Samples are returned immediately upon conclusion of the analytical tests to the Hematite plant. The analytical laboratory handles these samples in a special area to prevent contamination of other products. The analytical laboratory also collects the waste solutions from the wet chemistry work and returns them all to the Hematite plant for reprocessing and recovery operations.

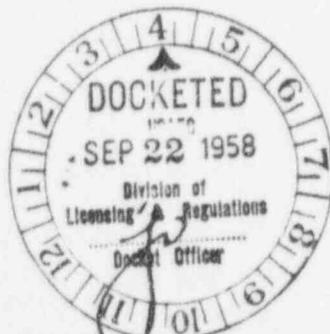

The Special Metals Division has a small laboratory space at the main St. Louis WORKS which is used almost exclusively for analytical development work in connection with new testing procedures. This space is used on an intermittent basis when needed. All other activities under this source material license are confined to the Hematite plant area.

If there are any further details that you desire, we shall be more than happy to cooperate.

Very truly yours,

F. M. Belmore

F. M. Belmore
