Re: Declination of Application for Material License Renewal
Control Number: 70143

Dear Ms. Reidlinger:

This is in reference to the request we have received from you to extend and renew our Material By-product License #50-191-27-01. After careful evaluation and conferences with our engineering department; it has been determined that it would not be practical to renew our license due to nil possibilities in the future of using radiation detection instruments servicing operations involving installation, relocation, maintenance of any radiation survey instrumentation or storage and handling of any radionuclear sources.

Currently VECO, Inc. does not have in its possession or control any licensed material. If at any time we reconsider to apply methods using radionuclear sources or related instrumentation, we would like to re-apply for a material license. If you have any comments or questions, please feel free to call me.

Sincerely,

Dorovan R. Jackson
