APPLICATION FOR BYPRODUCT MATERIAL LICENSE NASA AERONAUTICS AND SPACE ADMINISTRATION

SUPPLEMENT TO ITEM 1. (b)

Permanent NASA Kennedy Space Center, (KSC) facilities are located on Merritt Island, Florida, and adjacent Cape Canaveral Air Force Station (CCAFS). KSC activities may, at times, extend to other temporary job sites. KSC radiological activities at temporary job sites shall adhere to the KSC Radiation Protection Program requirements as well as local jurisdictional requirements.

APPLICATION FOR BYPRODUCT MATERIAL LICENSE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

SUPPLEMENT TO ITEM 4

Radiation Protection Committee Members

Chairman

Co-Chairman

Radiation Protection Officer

Emergency Preparedness Officer

Members:

G. Wyckliffe Hoffler, M.D. George Kontra Perry H. Williams William C. Willmot Kenneth C. Steel

Mark R. Schlomer David E. Dunsmoor Richard N. Young Frank W. Horn, Jr. Howard F. Blackwood, Jr. Hans W. Rudolph John W. Larson

See Supplement to Items 8 and 9 for Radiation Training and Experience Summaries.

APPLICATION FOR BYPRODUCT MATERIAL LICENSE NASA AERONAUTICS AND SPACE ADMINISTRATION

SUPPLEMENT TO ITEMS 6. (a) AND (b)

- Atomic Numbers 1 through 83 inclusive
- Atomic Numbers 1 through 84 inclusive plus Americium-241 and Curium-244

Any form not to exceed 10 millicuries per radionuclide and 1 curie total

Sealed or plated sources and foils - 150 curies total, not to exceed 100 millicuries per source except:

Cobalt-60 Not to exceed Cesium-137 10 curies per Hydrogen-3 sealed source

- Promethium-147 Not to exceed Polonium-210 1 curie per source
 - Krypton-85 Not to exceed 5 curies per source

Sealed sources - 11 curies total, not to exceed 11 curies per source

Plated sources, foils, solid 1 millicurie total, not to exceed 100 microcuries per source except depleted uranium 2100 kg.

Any form - 1 millicurie, not to exceed 100 microcuries per source

Plated sources or foils; each source not to exceed 0.00017 grams, total not to exceed 0.0017 grams

Plated sources or foils; each -7 source not to exceed 6.0 x 10^{-7} grams, total not to exceed 6.0 x 10^{-6} grams

- 3. Californium-252
- 4. Uranium (All)
- 5. Thorium (All)
- 6. Plutonium-239
- 7. Plutonium-238

SUPPLEMENT TO ITEMS 6. (a) AND (b) (CONTINUED)

8. Plutonium-238

Plutonium-Beryllium sealed sources; each source not to exceed 0.6 gram., total not to exceed 1.2 grams

14

٢

9. Atomic Numbers 1 through 84 Any form - 250 curies total Inclusive plus Americium-241 and Curium-244 Compared what 2-

APPLICATION FOR BYPRODUCT MATERIAL LICENSE NASA AERONAUTICS AND SPACE ADMINISTRATION

SUPPLEMENT TO ITEM 7

Use of Radioactive Material

6.a. (1, 2, 3, 4, 5) - Research and development, calibration, luminescence, static eliminating, and temporary storage.

6.a. (6, 7, 8) - Calibration, collection, temporary storage

6.a. (9) - Temporary storage

NOTE: This is intended to accommodate items such as transferred sources or payloads, impounded sources, and waste.

The following additional authorizations are also requested:

- Any radioactive material under this license which is incorporated into spacecraft may be launched in accordance with the "Nuclear Safety Review and Approval Procedures for Minor Radioactive Sources in Space Operations," approved by the Executive Office of the President through the National Aeronautics and Space Council, 16 June 1970 (see attachment to this supplement).
- Any source stored as waste is exempt from periodic leak tests.
- 3. The requirements of periodic leak test do not apply to sealed sources installed and maintained in readiness in space flight hardware (or backup hardware) prior to launch.
- NOTE: Radioactive material under this license will not be used on or in human beings.
- NOTE: This application does not request authorization to perform gamma ray radiography. Onsite nondestruct testing facilities and sources are owned by and stored at NASA/KSC; however, the utilizing contractors are required to maintain their own licenses to perform radiography.

KSC is primarily an integration and launch facility for spacecraft, payloads, and vehicles that are manufactured by various contractors and experimenters offsite. The upcoming Space Transportation System (STS) (Space Shuttle) is capable of simultaneously placing many hundreds of experimental packages into space. The broad scope of this license is intended to provide the option to consolidate control of tenant and visitor (experimenter payload) sources at KSC which was not possible under NRC License 09-11149-02.

and the second of the second

SUPPLEMENT TO ITEM 7 (CONTINUED)

In addition to sources which may be part of flight Nardware or ground sources required for calibration/checkout of flight hardware, the current use and inventory of 09-11149-02 will be incorporated into this license. Additional tenant use of sources is expected as programmatic needs evolve and are identified. Some sources which are presently owned by NASA/KSC but licensed/ used by contractor tenants for facility support may be brought under this license.
