Re: Indian Point Unit No. 2
Docket No. 50-247

Dr. Thomas E. Murley
Regional Administrator
U.S. Nuclear Regulatory Commission
Region I
631 Park Avenue
King of Prussia, PA 19406

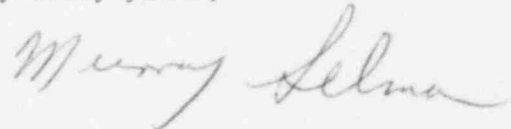

Subject: Third Supplemental Radiation Protection Oversight
Committee Report.

Dear Dr. Murley:

Enclosed is the third supplemental monthly report of the Radiation Protection Oversight Committee covering its activities during the month of November 1985. We believe our commitment to ALARA and the extensive efforts we have taken to implement these principles will pay dividends during our upcoming outage. We welcome the opportunity to discuss our radiological outage planning with your staff.

If you, or your staff, have any questions regarding the committee's or the station's radiation protection activities, please contact me.

Very truly yours,

Enclosure

Indian Point
Radiation Protection Oversight Committee
Report to the Vice President, Nuclear Power
for November 1985

The Committee met at Indian Point on November 18, 1985. The major Committee activities included:

1. Report from the Committee's Radiological Assessor
2. Discussions with: Richard Davisson
John Goodale
W.A. Homyk
John O. Parry
John Spivak

Committee Findings and Recommendations:

1. The Committee was impressed that each of the individuals we talked to at this meeting appears to be strongly aware of ALARA planning and his role in it, as well as the relationship between productivity and ALARA.
2. A one day Operational/Design ALARA course has been developed and presented to Con Edison personnel from a variety of organizations which have responsibility for work related to the Indian Point Facility. The Committee commends such efforts to raise ALARA consciousness. We recommend consideration be given to the question of how high consciousness of ALARA principles will be assured for non-Con Edison (Contractor) personnel involved in the outage.
3. The Committee was pleased to see the preliminary collective dose estimates for various outage tasks that have been prepared and promulgated. It is important that throughout the outage planning and operation process there be continuing awareness by all involved of the collective dose goals.
4. Low dose locations, suitable for use as staging and rest areas during outage operations, are being identified and established. The Committee encourages further emphasis on this aspect of outage exposure control.

Adopted by the Committee, November 26, 1985.

J. P. Davis
Chairman
