Mr. James C. Malaro, Chief
Materials Branch
Directorate of Licensing
U. S. Atomic Energy Commission
Washington, D. C. 20545

Dear Mr. Malaro:

Enclosed is my review and analysis of the revised Kerr-McGee Corporation application for permission to operate an injection well at the company's Sequoyah plant, as requested in your letter of June 2.

The review is not entirely restricted to the geologic aspects of the application. However, I have stressed the geologic aspects, since they are the most critical at the present time.

I hope that the review is responsive to your request. Please do not hesitate to contact me if any clarification or additional information is needed. I have retained the application to allow for further study if necessary.

A total of five days time was required for the review. I might call your attention to the fact that my present appointment as consultant to the Atomic Energy Commission expires June 30, 1972.

Thank you for the opportunity to be of service.

Sincerely yours,

Don L. Warner
