Attention: Mr. Roger D. Caldwell, Manager
Health, Safety and Licensing

Gentlemen:

Pursuant to Title 10, Code of Federal Regulations, Parts 40 and 70, Source Material License No. SMB-502 and Special Nuclear Material License No. SNM-145 are hereby amended to extend the expiration date to December 31, 1969, as requested by your letter dated August 14, 1969.

All other conditions of these licenses shall remain the same.

In your letter of August 14, 1969, you indicated that you were considering an application to combine the activities presently authorized by Licenses Nos. SNM-145 and SNM-414 into a single license. As discussed with your Mr. Caldwell, we have no objection to such a consolidation provided that the technical criteria and specifications for plutonium facilities and operations are clearly and separately stated. However, it appears that such a consolidation at this time might further delay the renewal of License No. SNM-414, which we would like to bring to an early conclusion. As we understand, the preparation of your revised application for renewal of License No. SNM-414 is nearing completion.

With respect to Source Material License SMB-502, you may wish to consider consolidation of these activities with those authorized under License No. SNM-145 in the preparation of the renewal application.
