

MAR 31 1986

Mr. P. B. Fiedler
Vice President and Director
Oyster Creek Nuclear Generating Station
Post Office Box 388
Forked River, New Jersey 08731

Dear Mr. Fiedler:

SUBJECT: REQUIRED ACTIONS BASED ON GENERIC IMPLICATIONS OF SALEM ATWS
EVENTS (GENERIC LETTER 83-28) - ITEMS 3.1.3 AND 3.2.3 (POST
MAINTENANCE TESTING) (TAC 50325, 53864)

Re: Oyster Creek Nuclear Generating Station

The NRC staff has completed the review of your responses dated November 14, 1983, and October 23, 1985, to Items 3.1.3 and 3.2.3, Post Maintenance Testing, of Generic Letter (GL) 83-28 dated July 8, 1983. The staff concludes that your responses to these items for Oyster Creek are acceptable. The staff's Safety Evaluation is enclosed.

This completes our review of Items 3.1.3 and 3.2.3 of GL 83-28. The staff's review of your responses to other items of the generic letter is continuing.

You stated in your submittals that the Oyster Creek Technical Specifications (TS) do not require post-maintenance testing for the reactor protection system (RPS) components. You stated that you incorporate the post-maintenance testing requirements for these components into station procedures as were described in Inspection Report No. 50-219/84-31. The staff concludes, however, that the TS should require post-maintenance testing of RPS components and requests you to propose appropriate technical specifications requiring such testing. These specifications should be proposed before the restart from the Cycle 11 Refueling outage scheduled for April to October 1986.

Sincerely,

Original signed by

John A. Zwolinski, Director
