Mr. Darl Hood
Project Management
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Docket Nos. 50-458 and 50-459

Dear Mr. Hood:

The attached Stone & Webster Progress Report dated June 20, 1977 to Gulf States Utilities Company is the one to which I referred in our telephone conversation on Monday of this week.

The statements on page 2 about the Alligator Bayou Study and the NRC site audit (April 1977) are serious, in my estimation, and require investigation and explanation. Before going any further with my own efforts towards those ends, I am seeking the assistance of you and Mr. Brenner.

I hope that this matter can be handled from Washington rather than leaving it up to Region IV, I&E. To-date, it hasn't been apparent to me that the Region IV Inspectors possess sufficient background knowledge of the Staff's review and conclusions about the River Bend application for construction permits so that they can spot discrepancies, unevaluated changes and violations of the CFPF's. How else can one explain their failure to detect changes in the transmission line routes, the erosion contamination of the emplaced backfill, the substitution of culverts for a bridge over Alligator Bayou and the problems with the storage, etc of rebar? These happen to be a few of the things I spotted from reports, etc and directly or indirectly brought them to the attention of the NRC.

After talking with Mr. Seidle on Monday, it was apparent that I will have to deal with Mr. Glenn Brown about the Alligator Bayou part of this attached report. Based upon earlier experience, that will be a waste of time and ineffective, too. This is another reason for my not wanting to work through the Region IV office.

I have no objections to this informal letter and its attachment being placed in the LPDR should you or Mr. Brenner consider that desirable at this time. In the meantime, I will await your response as to what I should do next.

Sincerely,

H. Anne Plettinger
H. Anne Plettinger

Enclosure (1)
cc: Lawrence Brenner, Esq.
