Mr. Robert D. Martin
Regional Administrator, Region IV
U.S. Nuclear Regulatory Commission
611 Ryan Plaza Drive, Suite 1000
Arlington, TX 76011

Subject: Waterford SES Unit 3
Docket No. 50-382
License No. NPF-38
NRC Compliance Bulletin No. 87-02

Dear Mr. Martin:

As requested in NRC Compliance Bulletin 87-02, "Fastener Testing to Determine Conformance with Applicable Material Specifications", Louisiana Power and Light Company submits the enclosed information concerning receipt inspection and internal control procedures for fasteners and the results of independent testing of fasteners at Waterford 3.

Should you require additional information, please feel free to contact me or G.E. Wuller, Operational Licensing Supervisor, at (504) 464-3499.

This response is submitted as requested under affidavit under provisions of Section 182a of the Atomic Energy Act of 1954, as amended.

Very truly yours,

R.F. Burski

PARISH OF ORLEANS)

Subscribed and sworn to before me, a Notary Public in and for the Parish and State above named this 18th day of January, 1988.

Notary Public

My Commission expires life.

LP&L Response to
NRC Compliance Bulletin 87-02

Louisiana Power and Light Company submits the following information for the requested items:

Receipt Inspection and Internal Controls of Storage and Issuance

Procedure for receipt inspection of safety-related fasteners requires verification that identification and marking of fasteners is in accordance with imposed requirements. Vendor provided documentation is reviewed to ensure that items received were fabricated, tested and inspected prior to shipment in accordance with invoked codes, standards and specifications. For non-safety-related material, QC involvement in the receipt inspection is not required. Subsequent to receipt inspection, the items are appropriately tagged depending upon safety classification and released for packaging and labeling. The items are then stocked in a predetermined, computer generated stock location in a controlled warehouse. For issuance of an item from stock, a pre-approved requisition with a complete description of the requested item is presented to the warehouse. The warehouse fills the requisition as stated, writes the Quality Release Tag number on the requisition for safety-related material, and issues the item.

Selection and Testing

With the NRC inspector participating, the following samples selected for testing were pulled from the warehouse stock. The samples were bagged by lot and identified by type and quantity.

a) Safety-Related

The following sample of sixty fasteners were selected for testing and grouped in ten lots of six to provide for two chemical, two hardness, and two tensile tests.

Sample ID	Type	Quantity
10127-PT-002	A193, Grade B7	6
10128-PT-002	A193, Grade B8	6
10131-PT-002	A325, Type 1	6
10132-PT-002	A325, Type 1	6
10133-PT-002	A325, Type 1	6
10134-PT-002	A325, Type 1	6
10137-PT-002	A490, Type 1	6
10138-PT-002	A490, Type 1	6
10140-PT-002	A307, Grade B	6
10141-PT-002	A307, Grade A	6

Sixty nuts were selected for testing and grouped in lots of 6 (or 12) to provide for 2 (or 4) chemical and 2 (or 4) hardness tests. In all, twenty nuts were hardness tested, twenty were chemically analyzed. Since tensile testing was not required the remaining twenty nuts were not tested.

Sample ID	Type	Quantity
10129-PT-002	A194, Grade 2H	6
10130-PT-002	A194, Grade 8B	6
10133-PT-002	A194, Grade 2H	6
10134-PT-002	A194, Grade 2H	6
10135-PT-002	A563, Grade C	12
10136-PT-002	A563, Grade A	12
10138-PT-002	A194, Grade 2H	6
10139-PT-002	A563, Grade A	6

b) Non-Safety-Related

Since these fasteners and nuts were ordered non-safety, not all of the purchase orders specified an ASTM requirement, in which case the material specifications and testing criteria are not recorded on the attached data sheets.

As shown below, six lots of four fasteners each were selected for testing. In each lot, two fasteners were hardness tested and two were chemically analyzed.

Sample ID	Type	Quantity
10175-PT-002	A307, Grade B	4
10176-PT-002	A307, Grade B	4
10178-PT-002	None Specified	4
10179-PT-002	None Specified	4
10180-PT-002	None Specified	4
10181-PT-002	None Specified	4

Five lots of four nuts each were selected as shown below. In each lot, two nuts were hardness tested and two were chemically analyzed.

Sample ID	Type	Quantity
10175-PT-002	None Specified	4
10177-PT-002	None Specified	4
10179-PT-002	None Specified	4
10180-PT-002	None Specified	4
10181-PT-002	None Specified	4

Partek Laboratories, who is listed on the Waterford 3 Qualified Suppliers List (QSL), performed the required testing in accordance with the fastener's specification, grade, and class.

Results

The results of all tests, together with supporting information, are provided on the Attachments (Fastener Testing Data Sheets and Metallurgical Certificates). As requested, the class/procurement level for the Waterford 3 classification system is as follows: (1) Quality Class I is safety-related, (2) Quality Class II is non-safety-related/QA required, (3) Quality Class III is commercial grade as defined in 10CFR21.3 and, (4) Quality Class IV is non-safety-related/non-QA required. A review of the

results was performed by the Waterford 3 Nuclear Operations Engineering and Quality Assurance Departments. In summary, all tests were satisfactory with the exception of the following.

Item ID	Criteria Out-of-Spec.	Actual	Required
10133-3N	Low Carbon content	0.36	0.40 Minimum
10133-4N	Low Carbon content	0.34	0.40 Minimum
10134-4N	Low Carbon content	0.34	0.40 Minimum
10138-3N	Low Carbon content	0.35	0.40 Minimum
10138-4N	Low Carbon content	0.36	0.40 Minimum
10140-1	Hardness too high	98 HRB	69-95 HRB
10175-1	Hardness too high	31 HRC	69-95 HRB
10175-2	Hardness too high	29.8 HRC	69-95 HRB
10176-2	Hardness too low	67.8 HRB	69-95 HRB

Assessment

Regarding Sample 10140, the hardness range of 69 to 95 correlates to an ultimate tensile strength of 60 to 100ksi, which are the limits imposed by specification SA-307 Grade B. Since the actual tensile tests results are well within the specification, the hardness being slightly off is not that critical to the mechanical properties.

Since the carbon content of several samples tested by the independent laboratory were low when compared to the vendor's results, a re-test will be done to confirm the accuracy of the laboratory's results. Even if the lower carbon values are correct, there is no adverse impact on the mechanical properties of the material, since the actual hardness values were within specification limits. The specification (SA-29) allows for a carbon content of .37 and the laboratory readings were in the .34 to .36 range so the variation is not significant, considering the adequate hardness results.

Based on the above evaluation, there is no safety significance on the out-of-specification results of the bolting material.

Further Actions

Based on the results of the testing and a review of the current procedures (QAP-206 Rev. 4, QAP-250 Rev. 3 and QAP-251 Rev. 1) no further action is required.

Based upon review of IE Information Notice 86-25, Supplement 1, "Traceability and Material Control of Material and Equipment, Particularly Fasteners", the Waterford 3 Nuclear Oversight Committee has issued a Fraudulent Suppliers Program which provides for training of Supplier QA auditors on detection of fraudulent supplier practices, testing of materials at receipt inspection, and other applicable concerns. In addition, Waterford 3 QA Department has implemented an auditing handbook which includes detection of fraudulent suppliers. As an independent verification of product quality, Waterford 3 is in the process of setting up a program to employ the services of a metallurgical testing laboratory.

from Louisiana Power and Light - Waterford 3
for Chemical and Physical Testing

Chemical and Physical Testing is certified and performed in accordance with the requirements of Nuclear Regulatory Commission Bulletin 87-02, customer requirements, and applicable ASTM standard testing methods and procedures.

PHYSICAL TEST DATA:

Bolt Number	-1	-2	-5	-6	Required
Ultimate Tensile Strength (ksi)			90.1	82.6	60 - 100
0.02% Yield Strength (ksi)			83.5	72.8	Not Specified
Hardness (HRB)	98.0	94.5			69 - 95

The above bolts do not satisfy the requirements of ASME-SA-307 Grade B.
