SUBJECT: PLANT PERFORMANCE REVIEW (PPR) - ST. LUCIE 1 AND 2

Dear Mr. Plunkett:

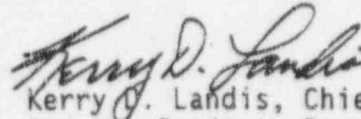

On February 28, 1996, the regional staff completed the semiannual Plant Performance Review (PPR) of St. Lucie Unit 1 and Unit 2. The staff conducts these reviews for all operating nuclear power plants to develop an integrated understanding of safety performance. The results are used by regional management to facilitate planning and allocation of inspection resources. The PPR for St. Lucie involved the participation of all technical divisions in evaluating inspection results and safety performance information for the period September 1995 through February 1996. PPRs provide regional management with a current summary of licensee performance and serve as inputs to the NRC Systematic Assessment of Licensee Performance (SALP) and senior management meeting (SMM) reviews.

This letter advises you of our planned inspection effort resulting from the St. Lucie PPR review. It is provided to minimize the resource impact on your staff and to allow for scheduling conflicts and personnel availability to be resolved in advance of inspector arrival onsite. The enclosure details our inspection plan for the next six (6) months. The rationale or basis for each inspection outside the core inspection program is provided so that you are aware of the reasons for emphasis in these program areas. Resident inspections are not listed due to their ongoing and continuous nature.

During each NRC inspection planned during this period, specific attention will be given to the verification of selected UFSAR commitments. Applicable portion(s) of the UFSAR that relate to the inspection activities will be reviewed and verification made that the UFSAR commitments have been properly implemented into plant practices, procedures and/or parameters. The goal is to determine the accuracy of the UFSAR regarding existing plant practices and conditions by providing specific attention to the UFSAR when performing various reactor inspections. Inspectors will not be judging the overall completeness of the UFSAR; rather, the inspections will focus on identifying differences between the UFSAR description and the plant.

We will inform you of any changes to the inspection plan. If you have any questions, please contact me at 404-331-5509.

Sincerely,

Kerry D. Landis, Chief  
Reactor Projects Branch 3  
Division of Reactor Projects
