United States NUCLEAR REGULATORY COMMISSION 799 Roosevelt Road Glen Ellyn, IL 60137

SUBJECT: License No. 48-12016-01, Control No. 17473

Gentlemen:

This letter is in response to the September 26, 1987 telephone request by Evelyn Matson, of your staff, to confirm and clarify several items mentioned in our April 13, 1987 letter.

Item 14. Personnel Monitoring-Extremity and Whole Body: All gauge users will have film badges exchanged monthly or when very low exposures are expected. TLDs exchanged quarterly. Research and other personnel will be issued film badges appropriate for the type of radiation sources being used. For example: Neutron, (or Neutron/Gamma) sensing badges will be used with neutron sources and gauges.

In addition to our current dosimetry vendor, R.S. Landauer, Jr. and Co., we seek authorization to use any NAVLAP vendor for these services.

Item 15. Leak Test Program: The authorization of any firm to perform leak test analysis will be verified. This verification will be performed by reviewing their license to insure that it has not expired, and that it opecifically authorizes analysis of radionuclides to be tested.

Item 17. Survey Program To clarify item 17 a., we will perform area surveys for radiation levels monthly in storage areas. We will perform area surveys for radiation levels in assembly areas when new operations are started, operations are changed, or when substantial changes are noted in dosimetry results. The results of these surveys will be used to evaluate procedures for lowest practical exposure.

To clarify item 17 f., Records of area surveys will be maintained.

Should there be any questions regarding this letter, please contact me at (414) 762-5100.

Sincerely,

SEAMAN NUCLEAR CORPORATION

Scott C. Seaman,

Vice President

OCT 1 6 1987
