1
2
3 OBJECTIVE OF CALCULATION 

4
5
6 To develop a position on the use of low
7 strength double nuts (A563 Grade A) on high
8 strength threaded rod (A193 Grade B7)
9 for use with a Richmond Insert.
10
11
12
13
14

15
16
17 CALCULATION METHOD

18
19
20 The compatible nut to be used in conjunction
21 with A193 Gr. B7 high strength threaded
22 rod is A194 grades 2H and 7. However in
23 some applications A563 Grade A nuts were
24 used in lieu of the A194 nut which is needed
25 to assure full capacity of the high strength
26 threaded rod. It is then necessary to
27 perform a comparison of the proof loads
28 between A194 Grade 2H, 7 nuts and
29 ASTM A563 Grade A nuts.

8 CPPP-7 REV. 2 4/25/86
9
10

11
12 CONCLUSIONS
13
14

15 The proof load for the A194 Grades 2H, 7
16 nut is significantly higher than that of the
17 A563 Grade A nut.
18
19

20 Using 2 A563 nuts will not necessarily increase
21 the total proof load because it cannot be
22 readily shown that the nuts will work
23 concurrently.
24
25

26 It is therefore required to conservatively reduce the
27 tension allowables for the A193 Grade B7
28 threaded rods as specified in CPPP-7
29 attachment 4-5 by the ratio equal to the
30
31

32
33
34
35
36
37
38
$$\frac{\text{PROOF (LOAD) STRESS OF A563 Grade A}}{\text{PROOF (LOAD) STRESS OF A194 Grades 2H, 7}}$$

39
40

41 when A563 Grade A nuts are used in place
42 of A194 Grades 2H, 7 nuts.

ANALYSIS

From ASTM 1980 Part IV ;

Mat'L A194 Grades 2H, 7

① PROOF (LOAD) STRESS = 150. ksi

Mat'L A563 Grade A

① PROOF (LOAD) STRESS = 90. ksi

$\text{REDUCTION FACTOR} = \frac{90}{150} = 0.6$
--

NUT TYPE	BOLT SIZE	NORMAL ALLOWABLE (kips)	REDUCED ALLOWABLE (kips)	FAULTED ALLOWABLE (kips)	REDUCED ALLOWABLE (kips)
HEX	1" ϕ	32.7	19.6	43.5	26.1
	1 1/2" ϕ	84.1	50.4	111.8	67.0

NOTES: ① NON-GALVANIZED NUTS
