JOHN S. KEMPER  
SENIOR VICE-PRESIDENT - NUCLEAR

Mr. William T. Russell, Administrator  
Region I  
U. S. Nuclear Regulatory Commission  
ATTN: Document Control Desk  
Washington, DC 20555

Docket Nos.: 50-277  
50-278

January 21, 1988

Subject: Peach Bottom Atomic Power Station Units 2 & 3  
I.E. Bulletin 85-03, "Motor Operated Valve Common  
Mode Failure During Plant Transients Due to Improper  
Switch Settings"

Reference: J. S. Kemper (PECo) letter to T. E. Murley (USNRC),  
dated November 3, 1986

Dear Mr. Russell:

The purpose of this letter on the subject I.E. Bulletin 85-03 program at our Peach Bottom Station is two-fold. First, submitted herewith is our report which partially satisfies the bulletin's reporting requirements and describes our Peach Bottom IEB 85-03 Program and plans for future work. Secondly, it discusses the schedule aspects of the program with respect to our plans to restart Peach Bottom Units 2 & 3. The referenced letter provided our initial response to the subject bulletin.

The attached report provides a complete response to I.E. Bulletin 85-03 action items a), b) & d) and a partial response to action item c) as related to Unit 2 specific test results.

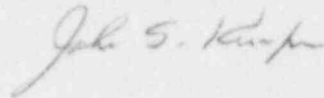

All general and unit specific program elements identified in the attached report, with the exception of the Unit 2 differential pressure testing, will be completed prior to the restart of each unit. The Unit 2 final I.E. Bulletin 85-03 response, containing the differential pressure testing results, will be submitted within three (3) months after testing completion following Unit 2 restart. This is necessary since most planned differential pressure testing requires the use of nuclear steam. Because the planned Unit 3 program does not include any differential pressure testing, its final response will be submitted before restart.
