SEQUOYAH NUCLEAR PLANT

SPECIAL MAINTENANCE INSTRUCTION

SMI-0-317-52

INSTRUMENT LINE CLAMP INSPECTION

Units 1 and 2

Revision 1

PREPARED BY: N. Sharma

RESPONSIBLE SECTION: Mechanical Maintenance

REVISED BY: N. Sharma

SUBMITTED BY: _____
Responsible Section Supervisor

PORC REVIEW DATE: FEB 18 1987

APPROVED BY: _____
Plant Manager

DATE APPROVED: FEB 18 1987

Reason for revision (include all Instruction Change Form Nos.):

Revised in accordance with ICF No. 87-071, PORC reviewed and approved 01/20/87.

The last page of this instruction is number: 12

SEQUOYAH NUCLEAR PLANT

PLANT INSTRUCTION REVISION LOG

SPECIAL MAINTENANCE INSTRUCTION SMI-0-317-52

REVISION LEVEL	Date Approved	Pages Affected	REASON FOR REVISION (INCLUDE COMMITMENTS AND ALL ICF FORM NUMBERS)
0	01/09/87	ALL	New Instruction- CAP #173.03 in response to ECTG Element Report No. 173.03.
1	FEB 18 1987	3,4,7	Revised in accordance with ICF No. 87-071, PORC reviewed and approved 01/20/87.

1.0 PURPOSE

The inspection program described below is to be performed to determine that installed tubing hangers meet the required span criteria and to find any missing hanger. A review of final results will be performed by DNE to ensure that existing tubing hanger installations are adequate to meet their design functions and to specify additional corrective actions, if required.

2.0 SCOPE

Tubing hangers to be inspected have been randomly chosen from universal printout and modification log books from different systems, and locations throughout Unit 1 and Unit 2 (except Turbine Building) and hangers are without insulation, by designated engineer. The initial sample size will be 83 tubing hangers. If the discrepancy rate is more than 5 percent of the initial sample, a subsequent sample size will be selected and incorporated as an attachment.

NOTE: Any subsequent lots shall be selected after DNE's evaluation of inspection results of previous lots.

3.0 REFERENCES

3.1 ECTG Element Report 173.03 SQN R1

3.2 47A050 General Notes

3.3 Unistrut General Engineering Catalog

4.0 PREREQUISITES

4.1 Designated engineer shall provide a work request (WR) for each unit to originate work performance in accordance with this SMI.

4.0 PREREQUISITES (continued)

4.2 The designated engineer shall provide field data packages for tubing hangers. Separate data packages for each hanger as listed in Appendix-A. The data package consists of following items.

- Data Package Cover Sheet
- Data Sheets 1 and 2
- Hanger Map (if available)
- Field sketch showing hanger to be inspected (optional)
- Copy of computer print from universal file or modification log from DNC (if available and for information only)
- Hanger Drawing
- Variance (if available)
- Mechanical drawing (if available)

The data package shall be numbered by the hanger number prefixed with the designation SMI-0-317-52. As constructed drawing shall be used in the package if available.

4.3 Hanger walkdown shall be performed during mode 5 and 6.

4.4 Designated engineer shall obtain required radiation work permits (RWP).

4.5 The following tools and equipment should be available for performing inspection.

- Flashlights
- Tape measures, scales, etc.
- Hanger identification tags
- Safety equipments such as body belts and lanyards

4.6 Scaffolds or temporary ladders shall be installed and removed after inspection work as needed to gain access to selected inspection items.

4.7 The designated engineer shall provide a briefing of the inspection requirements of this procedure to the QC inspectors and document.

5.0 PRECAUTIONS

5.1 Comply with industrial safety regulations as contained in HCI-M2 and HCI-M3.

5.2 Adhere to all plant radiological and safety procedures.

6.0 PERFORMANCE OF WORK

This instruction is a preplanned guide that establishes planning requirements, work performance instructions and documentation of work in the required sequential order.

6.1 Work Planning

The designated engineer shall complete planning of work and record the required information for each tubing hanger on each package.

6.2 Method of Inspection (Data Sheet 1)

The designated engineer will identify which line on the applicable hanger is being verified for span. This shall be accomplished by hanger map (if applicable) or field sketch which designates actual tubing configuration and identification by this inspection area which includes instrument number, Root Valve Number, etc., if field sketch needed. QC shall verify configuration and document on sketch. Engineer shall also sign sketch for verification.

6.2.1 The span between two hangers will be measured and documented on data sheet. Check two spans before and after the specified hanger. Spans will be verified by QC inspector and recorded by the designated engineer. QC inspector will sign as verifier. A sketch of tubing configuration shall be included with every data sheet. This will be either a hanger map or field sketch.

6.2.2 Check bolt tightness of hanger by hand and record on data sheet.

6.0 PERFORMANCE OF WORK (continued)

6.2 (continued)

6.2.3 Check for missing, damaged and tightness of instrument clamps or those clamps other than those allowed in 47A050 notes, sheet 17, on all lines on the designated support.

6.2.4 QC to verify hanger in accordance with typical hanger drawings for any other condition which could prevent hanger from performing required function. Document in additional comment area for items that can't be verified (i.e., hole diameter in unistrut, anchor, tightness, etc.), if so state "not able to verify" in comment section.

6.3 Reporting Discrepancies to DNE

6.3.1 The designated engineer shall provide inspection Data Sheets 2 and 3 to DNE for review. DNE shall complete Data Sheets 2 and 3 and return to the designated Maintenance Engineer.

Designated Engineers List
1) N. P. Sharma
2) A. Khanna
3) K. Chopra

6.4 Corrective Action

6.4.1 If DNE evaluates discrepancy and recommends corrective action, the work shall be performed in accordance with SQM2 or AI-19 as required.

Statement of Problem

EMPLOYEE CONCERN EC 173.03 IDENTIFIED POTENTIAL MISSING INSTRUMENT LINE CLAMPS IN CATAGORY I STRUCTURES AT SQN. A SAMPLE OF 60 CLAMPS WERE CHOSEN AT RANDOM AND THE SPANS ADJACENT TO THESE CLAMPS WERE MEASURED FOR EVALUATION OF POTENTIAL OVERSPANS. THIS CALCULATION WILL SUMMARIZE THE RESULTS FROM THE SAMPLING PROGRAM.

Abstract

These calculations contain an unverified assumption(s) that must be verified later. Yes ☐ No ☑

R0/ CALCULATIONS INDICATE THAT THE SAMPLED INSTRUMENT LINES AND THE CORRESPONDING SUPPORTS MEET NORMAL CODE ALLOWABLES AND ARE ACCEPTABLE AS INSTALLED.

R1/ CALCULATIONS INDICATE THAT THE SAMPLED INSTRUMENT LINES AND THE CORRESPONDING SUPPORTS MEET NORMAL CODE ALLOWABLES AND ARE ACCEPTABLE AS INSTALLED. THIS CALCULATION CONTAINS NO UNVERIFIED ASSUMPTION(S).
