Re: Application for License to Export
Enriched UF6 for Kansai Ohi Nuclear
Power Plant Unit No. 1. (XSNM-1404)

Gentlemen:

This is to request you to suspend the processing of the captioned case for a while, until we advise you of the resumption of your processing of this case.

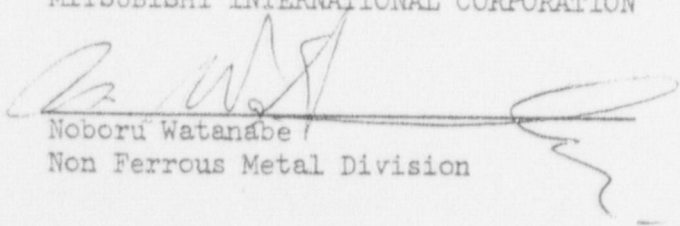

Our request is due to the newly established guideline of the Japanese Government that the export license for enriched uranium from U.S.A. should be applied to NRC only after the conclusion of the fabrication contract for fuel assemblies between a utility and a fuel fabricator.

The Kansai Electric Power Co., Inc. has not completed the fabrication contract with Mitsubishi Nuclear Fuel Co. (fuel fabricator) for the relevant shipment yet.

Thank you very much for your attention to the above.

Sincerely yours,

MITSUBISHI INTERNATIONAL CORPORATION

Noboru Watanabe
Non Ferrous Metal Division
