Dear Sir:

Three Mile Island Nuclear Station, Unit 1 (TMI-1)
Operating License No. DPR-50
Docket No. 50-289
Administrative Controls - Fire Protection Program

Enclosed is the TMI-1 Administrative Procedure AP 1038 "Administrative Controls - Fire Protection Program." This submittal supersedes the TMI-1 Fire Protection Program Plan which was submitted January 7, 1984.

The following changes have been made:

1. incorporation of the current Tech. Spec. limiting conditions for operation and surveillances for fire protection systems as operability and test/inspection requirements,
2. addition of test/inspection requirements for non-Tech. Spec. fire protection systems and components,
3. addition of preventive maintenance and corrective maintenance program requirements,
4. minor organizational changes,
5. addition of operability and test/inspection requirements for the Remote Shutdown System

One deviation is being made from the surveillance requirements proposed in TSCR 163 - Remote Shutdown System, which was withdrawn based on the inclusion of the requirements in AP 1038. The testing of certain switches requires de-energizing ES Motor Control Centers and 480 volt and 4160 volt buses. This places the plant in an abnormal line-up in that half of the ES system is unpowered. Therefore, this testing will be performed in conjunction with normal preventive maintenance cleaning of the 480 volt and 4160 volt breakers during every other refueling outage.
