Mr. Robert E. Denton
Vice President - Nuclear Energy
Baltimore Gas and Electric Company
Calvert Cliffs Nuclear Power Plant
1650 Calvert Cliffs Parkway
Lusby, Maryland 20657 - 4702

SUBJECT: COMBINED INSPECTION REPORT NOS. 50-317/94-31 AND 50-318/94-30

Dear Mr. Denton:

This letter transmits the report of the announced inspection conducted by Mr. L. Scholl of this office from October 3-7, 1994, at the Calvert Cliffs Nuclear Power Plant, Units 1 and 2, in Lusby, Maryland. The inspection included a review of activities authorized for your Calvert Cliffs facility. The inspector discussed the results of the inspection with Mr. P. Chabot and other members of your staff at the conclusion of the inspection on October 7, 1994.

This inspection was directed toward assessment of areas important to the public health and safety. Areas examined during this inspection were activities related to the engineering and technical support provided for the operation of the Calvert Cliffs plants. Within these areas, the inspection consisted of selected examinations of procedures and representative records, interviews with personnel, and observations by the inspector.

The inspector found that plant modifications and safety evaluations were generally of good quality. The engineering work backlog is closely monitored and efforts to reduce the backlog have been effective. Management support of initiatives to improve the engineering processes and products was evident in several areas. Overall, the inspector concluded that the plant engineering and nuclear engineering departments were providing good engineering and technical support for the operation of the facility.

Details on the areas examined during the inspection are described in the enclosed NRC Region I inspection report.
