Gentlemen:

This refers to the telephone conversation between you and Dr. Bruce S. Mallett of my staff on February 17, 1988. The subject of the conversation was 3M providing NRC certain items for analysis by Brookhaven National Laboratory, an NRC contractor. It is our understanding that you will provide the following items to the NRC or its contractor by March 4, 1988.

1. Microspheres utilized in the manufacture of 3M static eliminators. This will include microspheres labeled with polonium-210 (Po-210) after nickel coating is complete, microspheres labeled with polonium-210 prior to nickel plating (if possible), and unlabeled microspheres.
2. Epoxy or adhesive used in the tape transfer technique during the manufacture of 3M static eliminators. This will include epoxy used in current process (both prior to curing and cured) and epoxy (cured) from any previous construction designs (if available). If previous epoxy is available, you will also provide the results of any evaluations performed at the time of change.
3. All individual components used to assemble the Model 908 static eliminator.

The address below should be used when transferring materials directly to NRC's contractor:

Brookhaven National Laboratory  
ATTN: Dr. Carl Czajkowski  
Nuclear Energy Department  
Building No. 830  
Rutherford and Railroad Streets  
Upton, Long Island
