BOOK

Attn: The Director

Dear Director,

I just read that your department is intending to propose a ruling by which the nuclear power plant at Seabrook NH would be able to obtain an operating licence. I am appalled by this impending decision.

The Governor of Massachusetts and its representatives are the only people that are trustworthy enough to make such a decision regarding the safety of the people within the 10 mile radius of this plant. It is abundantly clear what is motivating the owners of the Seabrook plant to seek such a ruling. They are in business to make profits and my safety will always be a drain upon their goal.

I do not understand why the mistaken decision to build this plant so close to such a densely populated summer resort area should forever require bad decisions be made from then on for the benefit of reducing monetary losses. A great lesson can be taught here to all if we can only see that no amount of profits can outweigh the potential devastation that could result from this ruling. There is a vast waste land in Russia that is the result of decisions made by interests with such priorities.

It is the state of Massachusetts that will be faced with the burden of dealing with accidents of such a magnitude therefore it is the state of Massachusetts that should determine the feasibility of its prevention.

Please, please reconsider your ruling. It could be the difference between millions of dollars and millions of lives.

Yours truly,

Garret Almeida
