U.S. Nuclear Regulatory Commission  
ATTN: Document Control Desk  
Washington, D.C. 20555

Subject: Waterford 3 SES  
Docket No. 50-382  
License No. NPF-78  
Response to Generic Letter 88-03

- References: 1. LP&L letter W3P86-0036 to R.D. Martin, NRC from K.W. Cook dated February 26, 1986, subject: IE Bulletin 85-01.
2. LP&L letter W3P86-1949 to R.D. Martin from K.W. Cook dated August 22, 1986, subject: NRC Inspection Report 86-13.

This reply to the subject Generic Letter provides the confirmation requested regarding implementation and maintenance of procedures to reduce the probability of Auxiliary Feedwater Pump failure due to steam binding. (NOTE: This is comparable to the Emergency Feedwater (EFW) system at Waterford 3.)

As discussed in the referenced LP&L letters, Waterford 3 has installed surface mounted thermometers on the EFW pump discharge lines and has implemented procedures specifying monitoring once per shift of these thermometers and corrective actions should the temperatures reach certain limits. Our actions have been reviewed by the NRC Staff and determined to be adequate resolution to this issue as documented in Inspection Reports 86-16 and 86-17. These procedural commitments are currently in place and are maintained by the Waterford 3 Commitment Management System which will ensure our compliance with these commitments in the future.

This response is submitted as requested under affidavit pursuant to 10CFR50.54(f).

Very truly yours,

R.F. Burski  
Nuclear Safety & Regulatory Affairs  
Acting Manager
