OFFICE OF  
DOCKETING  
BRANCH

Nuclear Regulatory Commission  
1717 H Street, N.W.  
Washington, D.C. 20555

Dear Sirs:

My husband and I are deeply concerned regarding the decision by the Nuclear Regulatory Commission to let utilities submit evacuation plans without the approval of the states involved. We do not think or feel that a utility would put public safety first and above a profit and loss sheet, therefore, it is **imperative** that a state approve an evacuation plan.

We are concerned because we live within the 10 mile emergency planning zone for Seabrook Station. We are concerned because we have a governor that is more concerned with the Station going online than about the safe evacuation of the people within this emergency planning zone. It is really sad when a New Hampshire citizen must depend on a governor of another state for his or her safety.

We do not feel that the New Hampshire Seacoast has an adequate evacuation plan for its citizens nor do we support shrinking the 10 mile evacuation zone. You might feel this way if you lived in this very densely populated area in the summer. If you have ever been a victim of gridlock and sat in traffic for over an hour and a half for a trip that would normally take ten minutes, you too might also have these very same concerns.

We realize that the Seabrook Station is considered to be one of the safest nuclear plants ever built but nothing in this world can be considered or guaranteed 100% safe. We would be even more confident of the safety of this plant if in the event of a nuclear disaster we could recover 100% of our property loss instead of just 25c on every dollar.

We strongly urge you to rescind your recent decision and to take our concerns into consideration for any future decisions made by your commission.

Sincerely yours,  
*Elaine A. Manix*  
*George C. Manix*
