## EXECUTIVE SUMMARY

Quad Cities Nuclear Power Plant, Units 1 and 2  
NRC Inspection Reports 50-254/97012; 50-265/97012

This inspection included a review of plant support activities related to the physical protection of your facility. The report reviewed the effectiveness of licensee corrective actions to security issues, verified the performance of protected and vital area security equipment, evaluated alarm station(s) and security communication activities, and follow-up on previous inspection findings. The inspection was conducted between July 7 and 16, 1987.

- Security performance was effective. Security force members demonstrated an appropriate working knowledge of security requirements. Management support for security requirements regarding staffing, training activities, and maintenance of security equipment was sound. Security management's actions to address and resolve problems were timely and effective.
- Security computer replacement project was completed in a timely and effective manner. No significant problems were identified. (Section S2.1)
- The practice of starting your random and varied patrols at designated times limits their effectiveness. (Section S3.1)
- The establishment and implementation of a program to reduce security force personnel errors was a strength. Errors related to security force performance have been significantly reduced. (Section S4.1)
