

ADDENDUM 1  
(to the June 1997 NPDES Monthly Discharge Report)

Crystal River Mariculture Center  
NPDES FL0000159/IT09-154804F

The effluent discharge data for June 1997 indicated a Biological Oxygen Demand for 5 days (BOD<sub>5</sub>) value of 12.0 mg/l. The permit limit for BOD<sub>5</sub> is 5.0 mg/l. The background BOD<sub>5</sub> was measured in the ditch prior to discharge. The result of this analysis was 9.4 mg/l. A BOD<sub>5</sub> sample collected from the tank being discharged had a BOD<sub>5</sub> value of 2.1 mg/l, well below the permit maximum. Therefore, it is likely that the high BOD<sub>5</sub> value was the result of mixing with water in the ditch system and not characteristic of the effluent discharged from the Mariculture Center.
