MEMORANDUM FOR: File

FROM: N. Prasad Kadambi, Project Manager
Project Directorate - IV
Division of Reactor Projects - III,
IV, V and Special Projects

SUBJECT: MEETING WITH THE SOUTH TEXAS PROJECT TO
CONTINUE THE SSAT INSPECTION PROCESS.

The Safety Significance Assessment Team (SSAT) conducted a site inspection during the week of January 18, 1988 to determine the safety significance of allegations received from the Government Accountability Project. Some of the questions raised by the allegations required further information from the licensee, with the actual source of the information being Westinghouse. Subsequent to a telephone conference on February 5, 1988, the licensee was requested to travel to NRC headquarters to present the required information. The meeting took place in Room 8 B 11.

The meeting resulted in the following action items on the part of the licensee to provide:

- (1) Additional information and justification of the settlement monitoring program.
- (2) Additional information on the reactor vessel internals analyses.
- (3) Additional justification regarding reactor vessel flange waviness.
- (4) Additional information regarding main steam, main feed and auxiliary feed piping in relationship to the steam generator.
- (5) Additional information on the relevance of the Asko analyses to STP.
- (6) Additional information regarding weld fit-up of the main loop piping to accommodate steam generator tilt.
- (7) Additional information on timing of the development of the stiffness matrices with respect to the stress analysis
- (8) Additional information on core barrel deformation as a result of the ledge waviness.
- (9) Additional information regarding affect of steam generator tilt on leak-before-break analysis.
- (10) History on out-of-tolerance on presurizer hug.

The attendance list is attached.
